

MEETING REPORT #4

Date: 3 November 2004

Time: 15.00- 16.00

Location: Computer Engineering Department Canteen

Attendees: All members

Purpose:

- Discuss how we can do the task division for the analysis report; what parts must be done together and what others can be done individually.
- Determine another meeting date for doing the parts which must be done together and for assigning the remaining tasks to the group members.

Order of business conducted:

- We decided that drawing DFD is the root of the report and doing it together will be good for the report consistency.
- 2 days later, on Friday, we conducted the meeting we have decided on at the previous meeting. This meeting drives out approximately 4 hours. DFD Level 0, 1, and 2 were drawn. We didn't want to pass to the higher levels before talking with our assistant about some of our confusions.
- After the assistant meeting, Level 3 DFD, ER, and STD will be drawn together also, probably on Tuesday.
- Preparing data dictionary, preparing the 'Literature survey' part, drawing the Gunn-chart, generating scenarios are the tasks which can be assigned to the group members. We assigned most of them.
- We also discussed and agreed on some additional features/functionalities that we will add to the system;
 - sms sending capability(for advertising purposes and for some customer management related issues)
 - caller id detection
 - join tables option (while entering the table number, waiter can enter 2 tables' number)
 - finger mode(a kind of a safer mode on the handheld in the case of losing the stick used by waiters)

- feature of doing both online reservation and ordering at the same time(so, when customers go to the restaurant at the reserved date and time, they won't wait for the meals)
