3rd Meeting Report

Team Name: CoreTech
Attendees: All Team Members
Meeting Place: Computer Engineering Department, Canteen
Meeting Date/Time: 10.10.2005, 19:00 - 21:30

- As our market research proceeds, the development environment takes shape. At the time, we are planning to use J2EE (Java) on the server side and .Net on the PDA side. We will provide the connection between these by Web Services. Hence, we don't expect any problems. If we had found some successful Java based PDA simulators, we would fully use Java.

- We made some research about our PDA: HP Ipaq RX3715. It is a typical PDA that runs Windows Mobile CE 2003 on it.

- Next week we are supposed to do literature survey and prepare a report about it. We have to accelerate our researches in order to be successful.

- We have to decide a name for our product. Everyone should come to next meeting with suggestions.

- We agreed on constructing a website in two weeks time.

- We shared the duties.

    - Mustafa and Mehmet will work on the design of team logo,
    - Eda will make detailed research about ontology,
    - Sercan will search website development tools and languages,
    - Mehmet will try to implement a basic sample program that runs on PDA simulator,
    - Mustafa and Sercan will work together in designing the website,
    - Eda will install .Net 2005 Beta 2 and warm up to the environment,
    - Everyone will do market search, especially leading companies in the area will be determined as soon as possible. After that, a committee will visit and interview with them.
