

ORION[®]

This week we have completed the configuration management plan and reviewed a rival company's design report.

Ilgin YARIMAĞAN

This week I worked on our Configuration Management plan. First we generally identified our organization for configuration management. Then we discussed the necessary tasks and responsibilities for configuration of our project. After determining how to handle changes and errors during the development process we also discussed how to arrange meetings and what will these meetings involve. Then we prepared a report for the issues we decided together related with Configuration Management.

I also configured CVS system on Eclipse. Finally I continued working on the file operations part of our project.

M. Ergin SEYFE

This week, we read the design report of Starsoft. We evaluated it and filled the review form. Meanwhile, I learned how to use CVS. We will use Eclipse for reaching our project account. Moreover, I looked at the parts that I have done in demo. I found the problems that I need to solve and studied more to solve these problems. I have no problem with Incremental Iterative Simulation but I have now some problems with Timing Interval Simulation. I have been trying to find how to implement that part.

Mehtap Ayfer PARLAK

After our weekly meeting on Thursday me and Ilgin prepared our Configuration Management plan together. Then as every other group member I red the Design Report of StarSoft and send my review report to Eren.

I spend my time for learning how to use CVS during the rest of the week. Finally I tried to understand the Diglog format in order to implement Dglog import/export module.

Emin ÖZCAN

This week, we have a number of tasks. Firstly, i read Starsoft's design report and interpreted it. Each member gave his own grade,and an average grade was yielded. In addition to these,i investigated the Cvs tool of Eclipse and its usage.

Eren YILMAZ

This week, I worked on the Configuration Management Plan, with my teammates. Also, in weekend, I read the Starsoft's Design Report and evaluated it. After finishing evaluating the report on Sunday, I began working on Eclipse and CVS, and created the directory structure of our project. After that, I started my own personal planning for coding.
