

ORION®

This week we have continued on coding base classes.

Ilgin YARIMAĞAN

This week I continued working on the print part. I examined the Print2dtoStream class in order to generate the actual print job of the pdf file saved from the current status of drawing area.

I also made some research in order to handle on our multiple file format support. I tried to configure how to save a Bellatrix file in pdf, ps and html formats.

M. Ergin SEYFE

This week, I worked on the integration of the connection classes and the JHDL. Actually, this week was very hard for me so, I couldn't find enough time to investigate a way to disjoin wires in JHDL.

Eren YILMAZ

I could not work on the project this week due to my exams and homeworks of other courses. My part in scripting engine is dependent on the simulation package, therefore I will wait that package shape up.

Emin ÖZCAN

This week I could not do much work for the project because of our exams. I have plans to investigate redo/undo and zoom in Jgraph, but I have found a few examples about them. Also, since I am waiting for the component ini files and pictures from the GUI designers, the unconnect a line from a component is still a task to do.

Mehtap Ayfer PARLAK

This week I could not do much for our project because of my exams. I am planning to complete examining the Diglog file format by the end of this week. After our file format is determined exactly, I will start to implement import/export diglog files module.
