PERSONAL WEEKLY REPORTS:

Saliha ALTUNSOY

Project Leader, Gate Keeper

This week, we were mostly busy with our configuration management plan. In order to prepare it, I made researches on the internet and we made meetings in order to determine our coding standards. After all necessary points are determined, I moved on to the documentation process. In addition to preparing CM Plan, I made changes on code in order to make the synchronization job more efficient. And I read documents about design patterns to find a more efficient and reasonable design for text editor part.

Candan CEYLAN

Timekeeper, Optimist

This week, for the configuration management plan first I read the previous year's reports and IEEE standards and guidelines. After that, I have written my part of the CM plan. In addition, I established the CVS connection and uploaded source code to our CVS account. Finally, I have made some changes in our source code for optimization.

Canan ESKİ

Initiator, Recorder

I started the week by working on how a configuration plan should be and by examining previous reports. Later I have written my part for the report. I also read articles and tutorials about threads and tried to decide to which parts of our project we can apply them. I also looked for a pluggable look and feel. I have found some and applied them to our code. We also made meeting in order to discuss the recent works to be done and assigned them according to our living schedule.

Yavuz GÖKIRMAK

Optimist, Initiator

This week I worked on editor. Me and saliha implemented tab listener which increased the performance of editor. I have read documents about syncronization. We are focused on to increase performance and syncronazation is important in this issue.

Duygu GÖRGÜN

Devil's Advocate, Summarizer

This week, I worked on our web site. In addition to this, for our configuration management plan, I made researches and my friends and I did some resolutions. After this, I made documentation about our configuration management. Moreover, I did research about JAVA look and feel. We had meetings about our project and we decided to review our codes in order to make it more controllable.
