

# CEng 491 SENIOR PROJECT

FALL 2006

## Weekly Report

19.10.2006 - 01.11.2006

**Aylin KÖSTEKLİ – 1347699**

As we mentioned our previous weekly report, our team had 3 meetings and made decisions for preparing “Requirement Analysis Report” and we are going to start to write it this week, so I didn’t have to deal with it. Also I have already do research about GUI for our Development Environment, there isn’t any new progress about it. We got an e-mail from one of the companies that we try to contact for customer requirements. I wrote some questions to receive information that can help about project requirements. We are waiting for the reply.

**Fulya OKTAY – 1347756**

Since I had done the necessary research two weeks before there wasn’t much thing to do. We have organized job distribution for requirement analysis report in our meetings. I had already collected the necessary data about text editors. So I didn’t need to deal with it. I will be dealing with the analysis report this week.

**Mustafa AZAK – 1347178**

After the last meeting, we decided that in the “Requirement Analysis Report.”, everybody will be responsible for the subject s/he previously searched. I continued making Internet Search about Graphical Editors for Development Environments. I downloaded some tutorial-videos and observed the functionalities of these products. We also decided my topic is strongly related with GUI. Therefore, I am going to prepare requirements and use-cases about both GUI and Graphical Editor with Aylin. Moreover, I almost completed our web-site and it will be ready in a few days.

**Tayfun TEKİN – 1347996**

As I said in the last week’s report, I was assigned to do research about parser and debugger for the “Requirement Analysis Report”. I determined the requirements about my topics for the report. Also, I have learned which diagrams are necessary for the “Requirement Analysis Report” and I have started to draw diagrams for my topics which are parser and debugger. In addition to these works, I did some research for market analysis. I got information about products from internet and I created tables for comparing AJAX frameworks in the “Market Research Report”.

**A. Görkem EKMEKÇİ - 1347392**

In our previous meetings we decided on an outline for analysis report. Because I have done necessary research for my part (database connection) two weeks before, I haven’t done much at these two weeks. I interviewed with Kerem Önal from Tübitak-Bilten. I asked him what he would want to see from an IDE for internet application development with Ajax.
