FALL 2006

Weekly Report

09.11.2006 - 15.11.2006

Aylin KÖSTEKLİ - 1347699

This week, we have started preparing information for the initial design report. I have investigated a few "Design Report" samples and have done some research about the content of "Initial Design Report". As I was responsible for GUI component of our project, determined and wrote the requirements of GUI design in our "Requirement Analysis Report", I will also deal with same module of our project in "Initial Design Report". So I have started to search about GUI module requirements of AJAXDEV project. Also Fulya and me wrote the "Living Schedule" that shows all tasks that will be achieved during following 18 days and responsible member(s) of tasks. Since our priority is submitting our "Initial Design Report", tasks of "Living Schedule" that we will perform, are writing parts of report.

Fulya OKTAY - 1347756

This week, we shared the work between team members. I was supposed the investigate the initial design reports of last years' projects. So I read some of them and helped Görkem to make out an outline for our report and helped Aylin to prepare the living schedule. I also investigated Google Web Toolkit and some of Ajax applications which were designed with that tool. I couldn't do much more study about the project because of the midterms.

Tayfun TEKİN - 1347996

This week, I have prepared the GUI of our ide with Mustafa. First I have learned the JAVA SWING in a detailed way because there are lots of useful UI in SWING and it was eased our work while designing GUI. We downloaded some lookandfeels for our GUI because it is very important how it looks. Another important thing that we consider is the needs of users that may use our product in the future. We have two types of user which are experienced and inexperienced AJAX developers. So our GUI must address both of the user types. At the moment this GUI is our initial design and it will be opened any changes in the future.

A. Görkem EKMEKCİ - 1347392

This week I examined last two years' initial design reports and prepared an outline for our initial design report with Fulya. Other than that I studied some UML diagrams (use case diagrams, sequence diagrams, class diagrams and activity diagrams). Because of recent workload I didn't do anything else.

Mustafa AZAK – 1347178

As Tayfun mentioned, this week we prepared GUI for our application. I searched SWING widgets to enhance our GUI .Also as Swing supports pluggable look and feel, we searched supported "look and feel"s to find one that we like most. In addition, I examined some products to find out the way they design some essential parts of GUIs. We learned how to develop a GUI in Sun Java Studio Enterprise 8 and used it. Finally, using Adobe PhotoShop, I prepared the tool bar buttons for our ide.
