PROJECT MEETING REPORT 3

15.03.2008

AQUT

Anatolian QUalified Technology

## Meeting summary

During this week, we have been working on satisfying client-server communication. All of our web pages and applications were on the server side so we have planned to take the pages to the client side and leave the functions server side. To do this we have started to code functions according to our class diagrams. We have also backed up all the jobs that we have done during this week at CVS. For the next week, we are planning to come to a certain point to achieve our goals for the version one of our product.

## Individual Reports

### Şevket Dokgöz

This week, I have started to code and test the functions that were located in user management module, for the next I am planning to locate the web pages in the chrome folder in the extension and calling these functions which were on the server side from the client side.

### Uğur Irmak

This week, I have created all our tables at mysql server which was ready at bourne.ceng.metu.edu.tr and I have backed up these sql files at CVS.

### Mehmet Ali Özkeskin

During this week, I moved the messaging module of the project completely to the CVS. I do the necessary changes to adapt it to the new server and I make some improvements on that part. Now, this part is almost ready for integration for the version one.

## Mustafa öçelli

This week, I study on making Ajax request from client side of an application to server side. For this purpose, XMLHttpRequest object that belongs to JavaScript language is used. I try to use it for our project. I could not succeed yet. Hopefully, we plan to deal with it in few days.
