PROJECT MEETING REPORT 4

22.03.2008

AQUT

Anatolian QUalified Technology

Meeting summary

During this week, we have enough time to work on project. Nearly 3 days we have all worked together and reached the points that we have to till the first demonstrations. We have almost finished the jobs related with the servers. On the webpage side we have worked on the session management and on the extension side we have started to work with iframes to reach some of our goals. For the next we are planning to have a problem free product especially for the demonstrations.

Individual Reports

Şevket Dokgöz

This week, firstly I have tried to move XILENT to agmlab server but I have encountered some jsp related problems so I have decided to use my computer as a tomcat server for the time being. In other words XILENT is now reachable for “meturoam” wireless connection users. Secondly I have studied on session management and nearly completed this job with Mali. Then I have worked a little bit on iframes to use them on the extension side but I was not the person who handled the majority of this job.

Uğur Irmak

This week, I worked on the Ajax requesting part of this week's jobs. At first, I encountered some problems to apply such a part to our project but after getting some information about adjustment on the server and our application. We finished that part.

Mehmet Ali Özkeskin

At beginning of this week, we started with making Ajax request to the server. I did some searches about it and analyzed some examples on it. With the combination of information that my friends and I gathered about Ajax request subject, we completed this job. And then I started to work on

cookies and session management, we almost totally improved this part; there are some little problems. I can say that this week was quite efficient.

Mustafa Çöçelli

This week, I worked on making the ajax request from client side of our application to server side. I found an example that sending Ajax request to Java servlet in server side. We plan to send the webpage of a user to server by this way. It seems that we should send this information from Java servlet to jsp pages. We will work on it next week.
