PROJECT MEETING REPORT 7

11.04.2008

AQUT

Anatolian QUalified Technology

Meeting summary

We can not say that this week was totally effective considering the development of the project. Due to this week's being midterms and homework week, we couldn't find enough time to show enough development but little improvements were made this week both on note leaving and dynamic messaging area. For the next week we should both improve these parts and also think about the parts that are going to be handled till the second demo.

Individual Reports

Şevket Dokgöz

This week, I have studied on adapting the example about creating static tabs into our application. For that, a new tab should be opened for each conversation, and there should be enough tabs for all conversations. I am still working on this to apply it to our messaging area.

Uğur Irmak

This week, M.Ali and I improved note leaving operation. We added right-clicking "Leave a Note" option on the browser. In that process, we encountered some problems about importing JavaScript file to the current html file on the browser, but then we could manage it. After that, we will add database operations.

Mehmet Ali Özkeskin

I could not concentrate on the project at the first days of this week due to medical issues. When I came back, I got some knowledge about this week meeting and our assignments. Then I analyzed the leaving note operation that Uğur worked on. We together tried to add new feature to note operation. There was a button to add to note previously, now we do this by right clicking and choosing "Leave a Note" option.

Mustafa öçelli

This week, I searched internet for finding examples about tabs. I read documentation about dojo toolkit that provide tab container for this stuff. I found an example that provides static tabs. We need to create tabs dynamically, and adapt it to our application.
