## PROJECT MEETING REPORT 9

## 26.04.2008

## AQUT

## Anatolian QUalified Technology

# Meeting summary

This week AQUT have tried to focus on some main parts of the project rather than the smallest ones so as to provide the new version of XILENT. So we can say that, this week was totally effective. We had some problems ob public and private chat but we have nearly fixed them and now dealing with some minor problems of this part. On the other hand note leaving and tagging are other jobs that we working on. We have covered a route on tagging information on a website but we have not carried out yet about note leaving. For the next week, we are planning to do our best to provide a newer version of XILENT.

# Individual Reports

## Şevket Dokgöz

This week, approximately two days, I have worked with Çöçelli about creating dynamic new tabs for private chat. Using dojo library we have done most of the job but we have still some minor problems about this issue but I think I will come over them. But to summarize, from now on we have no problem about neither public nor private chat.

## Uğur Irmak

This week after the interview with our assistant, because of my job's densely schedule I could not work on our peoject any. Upto Tuesday we had worked with Mehmet Ali together on database operations of the note and tag modules but then Mehmet Ali did the duties alone.

I know that these kind of things can not be an axcuse and from now on I will concentrate on the version-2 demo deeply in order to recover this week.

## Mehmet Ali Özkeskin

This week, I concentrated on the note and tag operations part of the Xilent. Firstly, I was working on note operation, but I faced some problems on server connection. So I could not progress so much on that subject. In order not to waste time, I jumped on to tagging operation. Until weekly meeting day, I did some part of it, such as visual part, database connection. After that day, I have added some additional controls in the extension and database sides, since I was encountering some problems putting some of the characters to the tagged text. Nowadays, I am trying to add a popup window that is for user to enter related keywords of the tag. Until version 2, I hope these parts will be finished.

## Mustafa Çöçelli

This week, I have studied on the tab container feature of the Dojo toolkit with Şevket. We succeed that a user could chat with different friends of him/her on different tabs. We have a static tab for every user. Moreover, a new tab is opened dynamically when new conversation begins between two users. However, when a lot of tabs are opened, there is no nice lookout on the message screen. We will try to obtain a better lookout for the message screen of the application at this situation.
