Meeting summary

This week, we had a dense program due to other courses; therefore, we could not make a progress on the project studies. At the report of this week, we will mention about our plans for the next week.

Last week, we are assigned to implement a simple prototype for the project until the beginning of next month. So, in order to get prepared for that assignment, we will do some preliminary work and study the tool and programs that we will use in this step. Clearly, we will initially divide the work for the each group member and everyone will be prepared on that subject. Our subjects to be worked are Jsp, Plug-ins, JavaScript, XUL, XML processing, MySql and Tomcat. Moreover, we have to give a start for initial design report. We will make required researches and preparation for the report.
