## Weekly Report #11

### **This Week:**

- Routine weekly meetings are done.
- Web site regular checks are done.
- RB4-7 interrupts are done. However, our current PCB design only has four buttons. In order to compatible with CEng336 Development we must implement cross button functionality.
- The menu prototype is ready. Only data retrieving part of project remains as software development.
- Senior presentation is prepared and presented.

### **Next Week:**

- We divided project into two parts. One is about PCB and the other is part is about serial communication.

Kürsat ÖZER	Continue with the PCB part of project. Gözde and I, currently working on schematic.
Ümit SIVRI	Web site regular checks will be done. RS-232 serial communication and protocol implementation will continue.
Gözde KIRDAR	Printed Circuit Board design will be completed. If it finished by early we will start immediately printing process of design.
Emre KOSTUR	With Ümit, serial communication part of AP-400 module of AP-490 will be finished.
