EsSoft Weekly Progress Report #12

Team Report:

This week, we had a presentation on Tuesday. We add new features to our interface. Work on YMSG is finished about half. SVM optimization is continued.

Arda GÜÇLÜ:

This week, I had presentation; I focused on preparing my presentation. Therefore, I could not too much work about our project. Next week, I am planning to integrate decoder code to our project's code.

Müjdat BAYAR:

I have prepared our presentation with Arda and present it. I have integrated the parts that Gencay added to the interface of our program. I am working on new attributes of SVM for SMTP and POP3. I will continue with Svm next week too.

A.Gencay DEMİREL:

In this week I added new features to the interface. From now we can choose the pcap to read from. The 2nd panel is divided into 2. The left part shows the packet content and the right one will show the function of the packet.

Kerem OZARKAN:

In this week, I have added new attributes into our SVM model for YMSG. I also tried to create a log for YMSG conversation but it isn't completed yet. Next week, I will add new attributes for YMSG to increase the efficiency of our code. Moreover, I will also try to complete our log for YMSG

Next Week Plan:

Next week we the decoder code will be integrated to our project if we could succeed. YMSG will be finished. The other SVM part will be continued.
