EsSoft Weekly Progress Report #2

Team:

This week, the team worked on Configuration Management and Development Plan. Also Cvs was the topic. Each member worked on cvs individually.

Kerem Ozarkan:

This week, I spent my time mostly to our configuration management plan. Since we couldn't start our coding for this semester, I didn't look for pattern recognition. Next week, we want to start our coding.

A.Gencay Demirel :

In this week I worked on Configuration Management and Development Plan. I read slides about the Software Configuration Management that helped us to write the Configuration Management and Development Plan. And in the next week I will continue on the ui of the project and I hope to finish the ui of the design.

Müjdat Bayar:

I worked on cvs tools. To get connected to cvs root, I preferred to use wincvs. I installed the program and tried to connect. First I practiced with an example file and then I imported our project file. Also, I contributed to configuration management plan. Next week I hope to work on ymsg protocol.

Arda Güçlü:

This week, I continued making researches about artificial intelligence and analyzing the similar programs on the internet. Additionally, since configuration management and development plan is needed, I read the old plans.

Next week plan:

Our plan is to make a code design. It is important to have a good hierarchy in the cvs root. We should have a good directory design not to have confused at the later stages of development. Also we expect to have a meeting with Siemens. We will talk about the support of Siemens.
