EsSoft Weekly Progress Report #6

Team Report:

Of course the team worked on the first version of Protocol. The main job was user interface. Pop3 protocol was the second issue. Pop3 protocol is added to auto-sensor. User interface is done with some missing parts.

A.Gencay Demirel:

In this week I work on and complete user interface part of the design. on next week i will continue on working on interface (packet payload etc...)

Kerem Ozarkan:

In this week we worked on our interface design by using visual studio 2005 and prepare it for our first demo. Next week i will continue to investigate the ymsg protocol properties...

Arda Güçlü:

This week, I have continued working on pop3 implementation and I have begun detail design of auto sensing mechanism.

Müjdat Bayar:

We worked on the first version of Protocol. I helped Gencay to finish the user interface part of the program. I also worked on the integration of the autosensing code to the interface. Next week, I plan to improve the auto-senser in terms of smtp and pop3.

Next week Plan:

YMSG protocol will be added to auto-sensing simply. The other existing protocols will be improved.
