

FREELANCERS
WEEKLY REPORT#4
22.03.2008

Group(last week):

At the last meeting, we have looked at what we are doing and what are the problems. Also, we decided to apply Yağız's short term work plan.

Yağız:

This week I have worked on a new chat class. Our previous chat class was implemented as static. However this one is non-static and an object of this class will be created for every user. I have again had some problems and I have asked them on the dwr forums. Last few days of the week I have dealt with planning of version 1. I have prepared prototypes of the classes which are related with the group and topic search pages.

Caner:

This week I have continued to implement Facebook Application for profile import task. I have added two more PHP files to CVS for this application. Other than these I have renewed the Gantt Chart with new tasks before the Version 1.0. Also corrected the time for Version 1.0 to 4/4/2008.

Kutlu:

I have prepared the Profile class and maintain its database connection. Also I started to GroupAction class.

Serhat:

This week, I worked on COMET and I achieved to supply a reversed-AJAX service. At last, we will have not only messaging system, but also “instant” messaging system. Basically, it is a long-polling system using “jetty” on Tomcat and “dojo”, a Javascript library like DWR. In addition, I searched about STRUTS and collected some information which are “How STRUTS can integrate to a project?”. I found impressive solutions. In essence, I prepared a plan.

Group(next week):

Next week everyone will be dealing with jobs that are assigned to him. Yağız will be

completing instant messaging module with Serhat. Also, Serhat will be introduce group members to improvement about STRUTS plan on the next group meeting. Caner will put the application to SVN for testings and will try to finalize before time to help others with their tasks. Kutlu will finish GroupAction and GroupInfo class.
