

FREELANCERS
WEEKLY REPORT#5
29.03.2008

Group(this week):

Everyone has done his job that he was assigned to by the short time plan for version 1.

Yağız:

This week I have worked on ajax issues. I have dealt with DWR which is an api for ajax. I have read the documentation and asked some questions on DWR forums about subjects that were not clear in my mind. On the side I have started working on group pages for version 1.

Caner:

Because of the general maintenance in the SVN repository of AGM Lab, I had no chance of testing my Facebook application written for profile importation. However I continued coding blindly.

Kutlu:

This week I have finished implementing ExpertInfo, GroupAction, GroupInfo and the GroupFactory classes which will manage the group related operations. They are tested with database and ready to use.

Serhat:

This week I supplied a real instant messaging system at last thanks to Comet technology. Actually, completing this system has took my own week.

Group(next week):

Next week everyone will be dealing with jobs that are assigned to him. Next week Yağız will be dealing with the design of group pages. Serhat will integrate IM system to W-eXpert. Kutlu will be helping Serhat and Yağız. Hopefully Mr. Fidan will take care of the repository problems and this week Caner will complete tests and debugs.
