

WEEKLY REPORT

FREELANCERS

23.11.2007

For Group:

We have worked on the graphical user interface this week. We have started doing things related with the initial design report. Next week we will complete the report.

Caner:

This week I have studied on “Gantt Chart” to schedule our process. To get some inspiration about how things work especially in second term, I looked last year groups’ Gantt charts. After the discussion with the group in today’s meeting, I will finalize it. While waiting for our servers I looked for a few JAVA scriptlets that will be useful. Next week I will try to prepare some pages of our site and write the “Initial Design Report” with my friends. I will also get information about class diagrams.

Serhat:

After last meeting, I have started to prepare graphical user interface for clients with Kutlu. I have searched some web page templates like Kutlu and we decided to some critical issues about graphical user interface, mainly, overall w-eXpert design (e. g. friends screen is always on the left hand side of all pages.), where we can do the pages dynamic (e. g. when a user send a request to an expert, only some parts of the pages will be change), also what are the sub pages? Next week we will upload the pages that we have prepared to server.

Kutlu:

Last week I have continued looking for the web page templates those can be innovative. Than with Serhat, I started to construct the pages generally. Our discussions about the design of the interface are going on. Next week we will upload the pages that we have prepared to server.

Yağız:

This week, I have did some research about the profile transferring from other web sites to w-eXpert. I have concluded that we can implement this feature on our site. We will get information from the sites cember.net, facebook.com etc. Also I have continued writing the relational schema.

Next week I will write the initial design report.
