

FREELANCERS WEEKLY REPORT#8 19.04.2008

Group (this week):

This week we continued to work on the items that we have shared last week. We have improvements on the profile related actions and instant messaging.

Serhat:

This week, I have worked on chat class again. We have had several problems with Smack API. So, I have produced a trick that message bodies started with the receiver user id and in the message handler of Smack, this id resolved and the message structure reconfigured through id information. Also, I have started to design our chat window.

Caner:

This week I was a little bit behind the schedule for completing the tasks given by Yağız. I tried to implement FriendInfo and FriendRequestInfo classes and have not completed the tests yet.

Yağız:

This week I have dealt with the search issues of w-expert. I have learned much about fulltext indices and searches. I have thought that we can use this feature of MySQL and I have planned some small database tables and I have prepared a short term plan for next week.

Kutlu:

This week I have finished writing userActions , messageThread, messageThreadInfo and most of the ProfileFactory classes, than I have tested a part of them.

Group (next week):

Serhat will complete whole chat related jobs like rating expert at the end of the dialog. Caner will deal with the testings of the FriendInfo and FriendRequestInfo classes and complete friend related methods of the profile factory. Other than these if available he will look for some improvements about the facebook profile importation. Yağız will be dealing with search issues and integration of the profileFactory class into pages. Kutlu will finish userActions , messageThread, messageThreadInfo and ProfileFactory classes.
