

HSBS Smart – Weekly Report: January 11, 2008

We finished the process of reading sensor values in SP07 part. We designed schematic and pcb of our SP07 board. This week ,until the term demonstration day we try to finished a prototype of SP07 board with the help of our advisor assistant. Now, we can handle the serial communication problem and we develop a protocol and we can communicate between PIC and AP-400.Until the demonstration day we try to debug some serial console problems also.

Next Week:

Serdar Koçbey, Serkan Çağlar:

Enhancing capabilities of serial communication, simple database design, and detailed design report studying, preparation for demo day.

Hanifi Öztürk, Burak Cansızoğlu:

Producing SP07 board and communication protocol development and detailed design report studying, preparation for demo day.
