

## **HSBS Smart – Weekly Report: March 13, 2008**

We accomplished producing serial output from AP device which will enable interrupt driven mode. We tested running the AP device in bridge mode. Fortunately with the help of our sponsor company we brought back the wireless feature of AP device.

### ***Next Week:***

CVS will be initiated and living schedule will be renewed. Snapshot demo will be prepared.

### **Serdar Koçbey:**

Modifying init scripts for running the AP module when device is started. Modifying server module for connecting more than one node.

### **Hanifi Öztürk, Burak Cansızoğlu:**

Producing two new SP07 board according to new design. Improving the algorithm between SP07 and AP device for working in interrupt mode.

### **Serkan Çağlar, Burak Cansızoğlu:**

starting Gui part of the project.
