Evaluation of the Week

The group worked on the third assignment during the week and finished its implementation. Modifications both in the user interface and in the infrastructure have been made accordingly. A plug-in for orthophoto generation module has been implemented. The camera parameters have been incorporated into the data structures.

The whole codebase of Photokan have been ported to Windows platform. Currently Photokan works both on Windows and Linux. The group is also working on an easy to use deployment strategy for Windows platform. An Msi installer is currently under progress.

Personal Performance Reports

Okan AKALIN

I have worked on porting the existing codebase to Windows platform and also implemented the Windows versions of plug-ins and plug-in loader functionality.

Görkem KURT

I have implemented a plug-in employing the orthophoto generation module. I have also uploaded a new demonstration video to the website.

Kazım IŞIK

I have modified the project factory class to incorporate the camera parameters into the serialization and deserialization process.

Yunus OLGUN

I worked on the third assignment and implemented the orthophoto generation module according to the specs given by Milsoft.
