

Weekly Performance Report

20-29.05.2008

Okan Group

Evaluation of the Week

The group worked on the presentation last week and important integrations, improvements and bug fixes were made during the process. The georegistration module has been integrated into the package. All file types can now be serialized on disk along with their masks. Work on modules interfaces has been finalized except for some details. Putative matches can be modified, and region of interest can be selected for mosaicker.

Personal Performance Reports

Okan AKALIN

I worked on the presentation along with Görkem. I also made changes in the source code to improve the error reporting facilities and to prevent unwanted crashes.

Kazım IŞIK

I worked on integration of georegistration module and improvements over mosaicker module. Two dialogs were added for roi selection and putative match modification.

Görkem KURT

I have implemented the serialization methods for mosaicks and images. I have also worked on the presentation and made the video.

Yunus Olgun

I worked on stereo vision and mosaicking of orthophotos. The implementations are finished but integration is yet to be done.
