Weekly Report (1-8.11.2007)

Meeting Report

Evaluation of the week

- Previously aimed topic creation on wiki couldn't be done this week.
- The homework was one of the main topics. Everyone was assigned with the task of working on a library. Görkem will work on wxWidgets, Kazım will work on GDAL, Yunus will work on OpenCV and Okan will work on ITK. The split on the work is for benefiting from the experience during coding.
- Requirement analysis report was a major concern since the obscurity of exact input specifications is still present.

Plans for the following week

- The homework is to be finished by this week. We also try to integrate the registration capability as early as possible. The implementation is to be done by the whole group, gathering everyone's knowledge on libraries.
- The wiki topics are to be created by the end of this week.
- In order to end the confusion caused during the report writing, we will ask for clarification on some issues.

Weekly Performance Report

Okan AKALIN

I have continued the survey on image registration and I am still looking for pointers to suitable papers for our project. Besides that I was stalled by an examination and other homeworks.

Yunus Olgun

- Till Monday, I worked for requirement analysis report.
- I installed OpenCV and wrote a few samples.
- Currently I am working on wxwidgets and trying to learn the use of the necessary classes for Assignment#0.

Kazım Işık

Preparing myself for the Requirement Analysis Report has finally ended and we spent three days starting from friday with the group members to write the report. And also as the deadline of the assignment approaches, we decided to make a distrubution of duties, I took the job, to research the GDAL - Geospatial Data Abstraction Library - I am still getting used to this library, in order to handle the read and write part of the initial gui which we are planning to complete this weekend.

Görkem Kurt

During the week, i have worked on leica photogrammetry suite and tried to be familiar with it. I have also conducted a survey on image registration, the subject which Okan worked hardly last week. We have discussed on possible methods.
