This week we had 3 internal meetings at our department’s lab. We have already finished database review. We have started code review.

We decided on things to include what will be included in our first version. We will develop our Noun Phrase Parser, ExternalwordQuery, Morphology, a very simple GUI and DB design & mining-related implementation (only the findings that we have extracted will be inserted into database) will be completed till version 1.

In our code review, we decided all Word, Sentence and zemberekMorpology classes to be immutable. This means that we have lots of things to change in our code review.

Kerem and Makbule started to search for a new compiler because of the inefficiency of the previous parser. İpek, Çiğdem and Esra are changing the codes to be immutable.

We have migrated to CVS from SVN.
