What We Have Done Last Week :: Team
Before holiday we have splitted the workload. We aimed to improve our technical abilities. Since the last 1 month is a holiday our team members haven't worked as we thought. Some improvements are made to project but it is not as much as we talked before the holiday. Beside all this things we are ahead of implementation schedule. There is a long semester in front of us. We will work hard and complete all the specifications that we have told on design report.

What We Will Do :: Team
We have too many work to do. We will start debugging codes that are written in previous semester. We had some problems with some written parts of Marpuch. Next week Bugra and Arif will work on these codes. Ruslan will work on Javascript codes. Serdar will make research about Wap and try to design mobile structure of Marpuch.

During the holiday I spent my time on Javascript. For effective usage of this language I looked for editor. Among editors the most suitable for me was 1st Javascript editor. It higlights all html and javascript codes, and also have autocompletion. Besides I looked for many dhtml pages and found some nice scripts to be implemented in our projects.

In holiday I couldn't spent much time for the project. I made several attempts to deploy Lucene-Solr to our project however I was unsuccesful. I watched cvs tutorial videos that were prepared for the ceng 492 recitation. I believe that this will be helpful in the coming weeks because we used svn so far.

I have revised codes. I have worked on written codes of Marpuch. I have spent most of the time revising Java codes. I have changed some database structures. Since I don't have internet connection in my home, i haven't tried all the features. I wanted to finish tag clustering but i haven't completed yet.
