

This week as a Team

This week we came together twice and have prepared our project to demo. We have mostly worked for the demo. We have added new features to our project. We have completed most of the features.

Next week as a Team

Next week we are going to have meeting and work together. Our new mission is to work on Wap, Cometd and visual design. We have some problems with XMPP. We will focus on these issues next week.

This week due to demo I completed functionality of my tasks that I was given. Of which some are registration page, interface and some client side functionality for adding tag relationship, rating, some new changes in autocompletion.

Last week I have worked for prototype. Our primary objective is not to have surprises during demo. I have reviewed all the java codes and tested completed units individual and also together. I have implemented a new feature. Now pinning question is ready. Users can pin questions to be answered anymore.
