

Bugra Hasbek

In the previous week's meeting we were advised to read about lucene, a java library for text indexing and searching. I visited lucene's homepage and read some documents about lucene (faq, concepts, scoring...) then I skim lucene examples and some lucene tutorials. I also downloaded lucene library.

I also skim final design reports of previous years.

Group

This week we mainly read tutorials and documents about libraries that we talked in previous meeting. We also started preparations for final design report.

What we will do next week

We will start writing final design report and implement a basic lucene-based word completion system.

Ruslan Abdulla

This week I read final design reports of previous years and prepared a template for final design report. I also continued reading ajax tutorials.

Arif Ugurel

This week I read lucene tutorials and thought about how we can integrate it to our project. I have read solr tutorials and faq. I also read a final design report to see an example of a report. Because of finals I haven't worked hard. After this week I will start working hard on Marpuch.
