

This week as a team

After demo we have realised that our user interface is not so good. Therefore we have started to think new things about this. Besides, since in our project users were not able to talk to more than one expert ,we tried to make for users to talk more than one expert at a time. Moreover although we have got satisfactory results from solr in aspectf of tag relationships, we decided to look at it again.

Next week as a team

By next week we plan to nearly finish user interface, all subjects related to solr and multi chat feature. And after start to our most fundamental problem that is ajax, with no postback in it.

Arif Uğurel

Last week I have dealt with jabber chat problems. Our assistant told me to change the jabber chat specs. One user may talk with more than one expert simultaneously. I have changed all the jabber chat class to implement this spec. I have implemented session based structure but there are technical difficulties. Beside this i have improved the pinned question part and now it is fully functional.

Ruslan Abdulla

Since in demo our user inteface is not rated as friendly as we have planned, i searched for new user interface in that looking up new templates and many websites and some css files ready to use.
