WinstonSoft
Weekly Report #11

This week, we spent most of our time preparing the presentation. We prepared the slides and speech text as a group. Since we had a tight Schedule this week, we tried to study the Hidden Markov Model at the remaining time. We didn’t have time to work on Support Vector Machines or Neural Networks. We still have some questions about how to benefit from this in our Project. As we have not received feedback from Siemens yet, we could not start to work on the final design report.

Next week, we are planning to finish the GUI module of the prototype. Although still having some difficulties we are planning to finish the implementation of the decoder module. Besides we are going to start the implementation of the auto-sensing module according to the feedback that our supervisors are going to give.
