

WinstonSoft Weekly Report #11

This week: -Presentation

Next week: -Work on logging of YMSG

- Work on SVM classification functionality

- Work on database module

- Work on HTTP documentation

Elvan Gülen: This week I worked on the preparation of the presentation and also I worked on the demo. Since I have Toefl, and presentation and the network exam I couldn't spend too much time on the project. Next week, I will be work on expanding the content of YMSG log, and do more testing for the accuracy of the program. Besides, I am going to help Can with the classification of SVM.

Can Hoşgör: This week I helped Çağla and Elvan prepare the presentation slides. I also worked on the scenario of the demo. Because of the network exam and spring fest, I didn't do much with the rest of the project. Next week I'm going to work on the SVM module.

İlker Erçin: This week I helped my friend for preparing the presentation and since this week had been very busy I couldn't do a significant work on the project. Next week, I'm going to work on the database module.

Çağla Çığ: This week, I spent my whole time preparing for the presentation on 8th of May with Elvan. In addition to this, I decided to implement http classifier and add this feature to our project so I did a brief research on it. Next week, I am planning to do more research on http and begin implementing if possible.
