Weekly Report 2.7

This week:

- Limited time because of the Ceng 465 exam.
- Testing the existing program with various inputs.
- Working on YMSG protocol.
- Working on SVM module.
- Working on the database module.

Next week:

- Implementation of SVM.
- Implementation of YMSG module.
- Implementation of the database module.

Can HOŞGÖR: As I have the Ceng 465 Bioinformatics midterm, I could not spend enough time for the project. As I was working on the project this week, I tried to analyze libsvm, which is offered to us last week by Tolga CAN, to integrate it to the existing code. Next week I will be working on the integration of SVM to the system.

Elvan GÜLEN: I could not work on the project a lot this week because of the Bioinformatics exam. In my work for the project this week, I tried to analyze the SVM parameters that we have found before and worked a little about the YMSG protocol. Next week, I will be working on the SVM integration issues.

Nazif İlker ERÇİN: Because of the Ceng 465 midterm, this week I could not work on the senior project a lot. During my work, I tested the existing system that we have showed on the first demo with different inputs. Additionally I tried to analyze the YMSG protocol and next week I will be working on the YMSG module.

Çağla ÇİĞ: This week, when I was working on the project, I worked on the database and the binary protocol, YMSG, integration however because of the Ceng465 midterm I could not spend much time on the project. Next week I’m planning to work on the database and YMSG modules.
