

This week:

- Some changes are made to GPRS Connection implementation
- Connection types:
 - Socket Connection,
 - Http Connection,
 - Datagram Connection,are tested for successful GPRS Connection on an actual cell phone
- Web Server is modified to be able to receive the messages for different types of connections

Notes:

- Although they all worked pretty good in the JDK color phone simulator, only using Http Connection, we have succeeded to establish a connection between an actual cell phone and the web server over GPRS.
