

This week:

- Bluetooth implementation is started.
- User interface implementation is started.
- GPRS Connection problem is solved.
- A php web page is created to serve as a transmitter between the mobile application and the database.
- The php page is designed to be able to keep logs of the data (measurements) history
- The successful transmission of the simulated sensor data to the database is achieved.
- A working prototype of the mobile application that can send the simulated data is created for the demo.
