Yurdakul Göksu Orhun

Onur Cem Sırlı

- We worked on our Final Design Report and examined following tools:
    - VideoLAN Server
    - Apache
    - nginx (web server)
    - pfSense
    - Pound
    - nginx (load balancer)
    - Puppet

- We made a field research about source code hosting sites. The most popular ones are:

    - Google Code, http://code.google.com
    - SourceForge, http://sourceforge.net/
    - github, https://github.com/
    - bitbucket, https://bitbucket.org/

    We will most probably use one of these.

- We started working on our project presentation. It will occur on 6.01.2011. Our power point slides are close to completion.

Next Week

We will have a meeting with our sponsor company's project manager and complete our Final Design Report. In addition, we will make our first presentation in the class.
