**Period:** 29 April - 6 May

This week we have made developments on User Interface, Detector and Recogniser components. The resolved tickets this week can be seen below.

**Tickets resolved this week:**

- create invisible button for car borders  
- move video processing in another thread  
- convert video area to QGraphicsView  
- use qSharedPointer instead of standard c pointers  
- create car records dialog  
- create a singleton db accessor class  
- retrieve owner and model of the car from db

Next week, we are planning to primarily work on the following tickets:

- resize QGraphicsScene to size of video frame  
- create a QTableModel and use with car records  
- fix flowing car borders issue
