Work Done:

- İşıl has prepared the project web page template and Burkay revised the details of the page.

- Çağrı and Caner installed and tried uDig, read tutorials, get know-how about its features and judged the suitability to our project.

- İşıl prepared the svn repository and uploaded the so far implemented part to repository. İşıl has also begun to code best path algorithm.

- Burkay solved the problem to use svn inside Netbeans on Windows.

Work to Do:

- Caner will work on Train Information System webpage design.

- İşıl will continue to code the best path algorithm and will prepare a sample database of connected cities.

- Çağrı will continue working on uDig.

- Burkay will work on GPS simulating.
