

# **CEng 492 SENIOR PROJECT SPRING 2007**

## **Weekly Report** **10.04.2007 - 16.04.2007**

### **Aylin Köstekli -1347699**

This week, I implement Photo Gallery AJAX Action with Fulya. We couldn't find a perfect a photo gallery design for our project. Therefore, we finished draggable button actions and photo gallery Ajax action GUI for user to choose options. I also tested our GUI, design-code synchronization and text editor functions and report some bugs.

### **Fulya Oktay - 1347756**

This week I helped Aylin for AJAX photo gallery. It hasn't finished yet. Also, I made some tests for design and code editors of our project.

### **A. Görkem Ekmekci - 1347392**

This week i continued to the implementation of our design editor module. I finished radiobutton and button components. As usual their properties can be changed from properties window. Also, when user selects a button, s/he can resize it by mouse. Resizable objects have a thicker border than not-resizable objects when selected.

## **Mustafa Azak - 1347178**

I keep working on CVS connection. I managed to run jCVS but I am still trying to learn its features and how to integrate with our system properly. I also write a tutorial about our system for my teammates. Tutorial shows how to create an ajax action in 6 steps. We develop a set of modular functions that an ajax action can be created easily with graphical user interface by following the certain steps.

## **Tayfun Tekin -1347996**

This week i finished Accordion Ajax Action. As I said last week, I implemented three different types of Accordion. Then, I did some research on the Internet about our debugger module Mozilla Rhino. Lastly, I finished Find & Replace functionality of our program. It uses Java's regular expression classes and methods.
