

HSBS Smart – Weekly Report: March 6, 2008

We worked on the review form of the final design report assigned to our team. Moreover, we have written Configuration Management Plan Report. Furthermore, we tried to configure the kernel of AP-400 in order to disable the serial console and enable the wireless feature simultaneously.

Next Week:

Serdar Koçbey, Serkan Çağlar:

Changing the protocol of serial data reading to AP-400 driven mode and bringing back the wireless feature of AP-400.

Hanifi Öztürk, Burak Cansızoğlu:

Designing new PCB and improving the algorithm of SensiBus Protocol.
