

GROUP WEEKLY REPORT

Project Group : ACME Soft

Project Name : EDUPLAN

Date : 19.11.2008

At the wednesday meeting we have discussed the concept and content of the project and made our mind understand certainly same thing from the project. We have shared the items to prepare for the report. We have met on Thursday and Friday. In each meeting we have combined what we have found separately. In next week, we will give a start to initial design report studies.

Kadir Kaan Evren :

This week, I introduced my friends about UML. Also, I constructed the Use-Case diagrams with Sami and explained them. Additionally Sami and I prepared deeply detailed usage scenarios. I also helped for general scope definition part of the requirements analysis report. In the last two days I have started to draw entity relationship diagrams for initial design report.

Sami Akkuş :

This week, I have primarily dealt with preparing the requirement analysis report. I identified use cases and drew diagrams with Kaan. I have written the functional requirement specification and system environment of the analysis report with the help of Kaan. In addition, we prepared glossary page, and user characteristics. After preparing analysis report, I have been keeping on surveying the applications which were developed and are similar to our project.

Candan Bölükbaş:

This week I have done Marketing Research and literature survey for the Requirement Analysis Report. I also made scheduling for the project and draw a "Gantt Chart". With the schedule in our hands we will proceed easily. Marketing research show how our project will be useful and what we need to do for users' expectations.

Mustafa Çağlar Yavuz :

During the last week, first two days like all group members I was struggling with preparation of the requirement analysis report. Although we worked together most of the time, we distributed the work to finish on time. I prepared the introduction part of the report. Before writing the process title of the report, I tried to choose the best model to apply to our project, and the best team structure. It was difficult to choose at first. Also I prepared software and hardware requirements title of the report. I plan to eliminate my inexperience, and I began to learn about ASP.NET and AJAX.
