CENG 492 - Weekly Progress Report 4 – Bug Busters

Work Done:

- Işıl has integrated the best path searching with interface, implemented a loader to load data from a csv file to database, and created tables.
- Caner worked on Railway Information System website pages design.
- Çağrı constructed our imaginary map, set the attributes of lines and points which will represent railways and station respectively.
- Burkay implemented a parser for shp files which will be used to generate sample GPS data.

Work to Do:

- Caner will continue working on Railway Information System website's other pages design and databases.
- Işıl will finish filtering the search results and work on scheduling of train services, assignments of trains to these services, etc.
- Çağrı will try to add some features to our map such as embedding it in a browser window, viewing features (zoom in/out, sliding), marking points.
- Burkay will go on implementing GPS simulator, parse dbf files and generate sample simulating data.
