

To-do List for 31.03.2013

tranquillum

Zeynep Mavuş:

- Completing the refrigerator simulation in Java and check it on raspberry
- Trying the simulation with zigbees

Şerafettin Öztürk:

- Continue searching and learning about cc2530
- Work on a new simulation using cc2530

Abdullah Hasan Taher Bayraktar:

- Completing the user friendly interface of the refrigerator devices (showing the current status of the device in one panel and applying new settings with another).
- Testing the interface before the demo (with the sample data resides in the database).

Anıl Ulutürk:

- Testing python codes running on raspberry with zigbee serial simulation and web interface.
- Preparing a sample temperature, power consumption etc data for the demo.
