

## İlke Çuğu:

I installed Caffe Framework and took pictures of İncir, Akçağaç, Çınar, İğde and Meşe leaves which will be uploaded to OpenProject soon.

---

## Burak Balcı:

I encountered with MatLab while searching for the most appropriate environment to process images. I looked for the boundaries of what to be made with MatLab. Then I saw some tutorials and exercised basics of MatLab such as array operations. Finally, I performed some operations like reading image from a file, writing image to a file, manipulating color values and geometric transformations of an image. I am working on it for further image processing operations.

---

## Emre Akın:

I could not manage to build android tabs because of the heavy exam and homework traffic. Instead of doing this, I have finished Listview of design side which is my second sprint task. Basically, each list item includes image of leaf, name of tree, latin name of tree and info button. After we, as a group, decide a design of main scene, I am going to change this listview item and size to that.
