## 1. Introduction

This document includes software requirement specification of Search & Rescue mobile and web application. The team structure will be shown at below.

### Team Structure

1. Ebru Aydın Göl - Project Advisor
2. Barış Nasır - Project Assistant
3. Yasin Berk Gültekin - Developer
4. Abdulkadir Dalga - Developer
5. Tuğca Eker - Developer
6. Hasan Ali Duran – Developer

### 1.1. Problem Definition

In this project, a system that will be used in Search & Rescue operations will be designed and its software components will be implemented. Main components of the system are:

- Mission Planning and Coordination Center
- Rescue Team Member Computers
- Rescue Team Member Smart Glasses
- Unmanned Reconnaissance Vehicle(Quadcopter)

S&R System is used for planning and executing missions that are aimed to find and rescue people who are lost or injured in the field. It consists of some subsystems which are used in mission planning, tracking and execution of the rescue missions. A rescue mission is planned in computer at Mission Planning and Coordination Center.

During planning phase, last known position and estimated position of lost person, digital maps of field, rescue team's information etc.. are used as an input. Mission will be planned in Planning & Coordination Center by using a computer having internet access and after planning has been completed, necessary information will be loaded to devices that is going to be used by rescue team.

When mission starts, everyone in the rescue team will be able to see their planned route on the mission computers and on the smart glasses. Also they will be able to see their position and everyone else's position on their devices. Information on the smart glasses will be presented using augmented reality technology. Information on the computers and smart phones will be presented in two ways; by augmented reality technology over device's camera view and by placing information on digital maps.

If needed, rescue team will be able to use quadcopter for reconnaissance and the video taken by camera of quadcopter will be transferred to smart glass and/or mission computers. Everyone in the rescue team will be able to contact to each other by text messages or by talking using VoIP technology. They will also be able to transfer their device's video streams to each others when they have been asked.

Everyone in the rescue team will be wearing pulse sensors. Everyone's health information will be displayed on mission computers and planning center by using these pulse sensors' information. This information will also be shared among team members' computers. Also, the actions (walking, sitting, running, etc..) of members during the mission will be shown on the mission computers. During the mission, execution of the rescue operation can be monitored by the mission center. All the positions of rescue members, health states and their actions will be shown on the Planning Software using Geographical Information System. If needed, a member will be requested to transfer his video image to the center and watched from there.

If a member finds the lost person from a distance, he will be able to measure the distance with laser range finder and compute his geographic coordinate. Then he is going to be able to mark his position and inform the other members and planning center. When the lost person is found during the mission, rescue team will put a pulse sensor to the person and person's health status will also be shown in all mission computers and in mission planning center up to rescue operation completed.

## **1.2. System Overview**

Project Search&Rescue is web and mobile application. Search&Rescue has two main parts. These parts are Mission Planning And Coordination Center and Rescue Team Member Mission Devices . For Mission Planning And Coordination Center there will be a web application which provides creating ,tracking and coordinating the missions. For Rescue Team Member Mission Devices there will be an android application that provides tracking other rescue team members , communicating with each others and coordination center and getting important data from external sensors such as pulse and muscle motions sensor. Since the project has an augmented reality part, also the camera is used for getting the real world data to be augmented.

### 1.3. Definitions, acronyms, and abbreviations

Terms	Definitions
<b>SRS</b>	Software Requirements Specification
<b>S&amp;R</b>	Search And Rescue
<b>AR</b>	Augmented Reality
<b>GPS</b>	Global Positioning System
<b>METU</b>	Middle East technical University
<b>GUI</b>	Graphical User Interface
<b>IDE</b>	Integrated Development Environment
<b>Android SDK</b>	Software Development Kit which is officially released for Android
<b>Android Studio</b>	Official IDE designed for Android
<b>UML</b>	Unified Modeling Language
<b>Use Case Diagram</b>	Diagram of interactions of users with the system
<b>Class Diagram</b>	Diagram that describes the structure of a system by showing its classes, attributes of these classes and method
<b>GIS</b>	Geographical Information System

Table 1 : Terms-Definitions

#### **1.4. Assumptions and dependencies**

We plan to finish this project by June 2017. We divided our schedule to two main parts according to school semesters. In the first semester we worked to create Mission Planning And Coordination Center which includes back-end and front-end and main part of the Android application that communicates Mission Planning And Coordination Center. We created object and database models. In the second semester we plan to apply video stream and VoIP to android application to communicate with members and center. Also Augmented Reality will be added on Android application.

We held weekly meetings with team members to discuss current situation of the project. We held weekly meetings with our assistant to report our progress. Also once in every weeks we held meetings with our supervisor to obtain solutions for our problems in the project.

## **2. Overall description**

### **2.1. Product functions**

We have two actors which are Coordinator and Team Member . Their use cases are mentioned below.

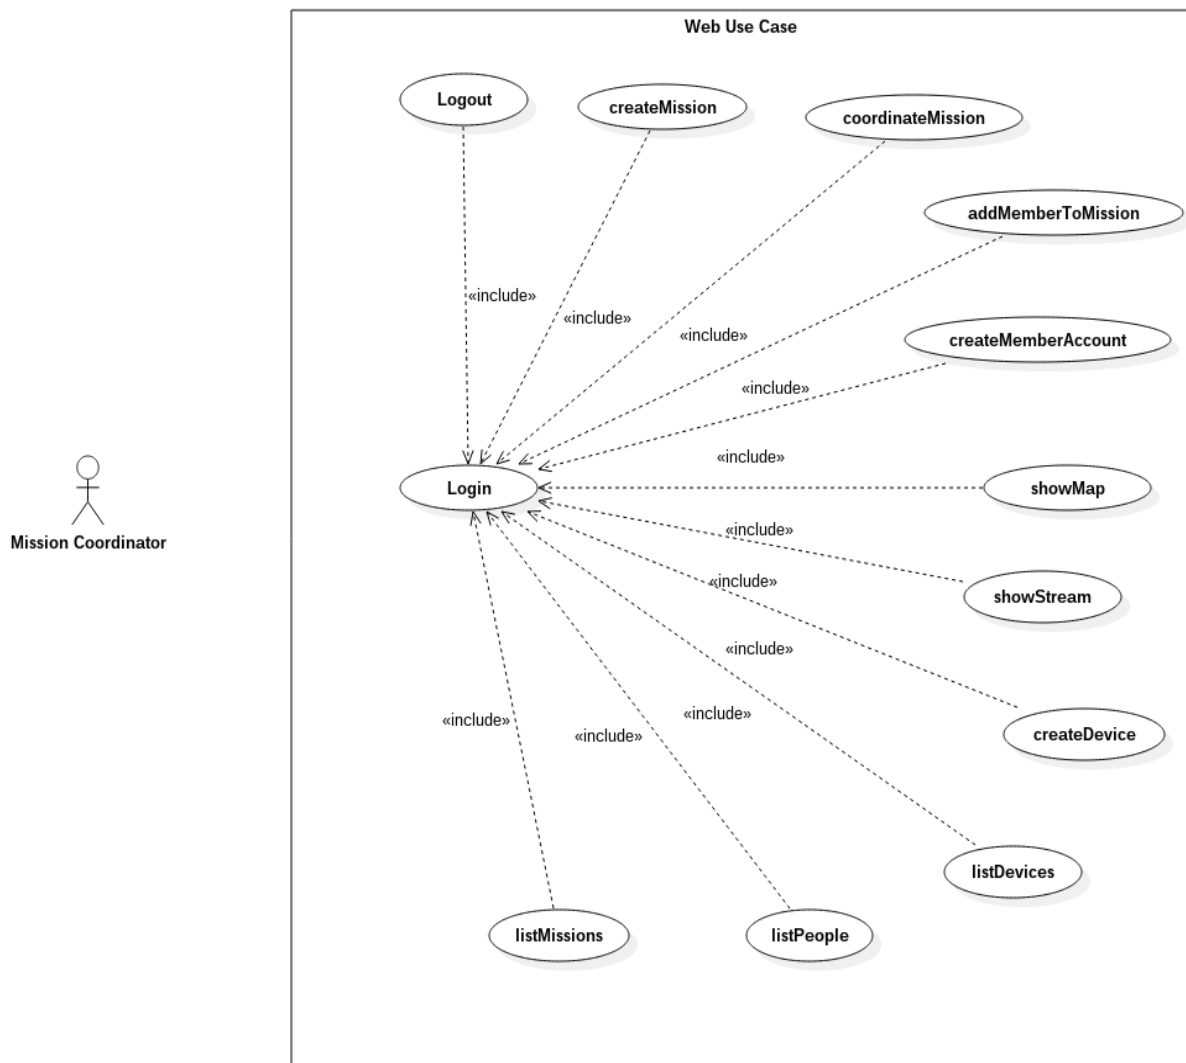

Figure 1 : Web Application Use Case Diagram

When actor is Mission Coordinator:

- Login: Coordinator will be logged in the system before executing any operation
- Create Mission: It creates a search and rescue operation
- Coordinate Mission: It coordinates the both mission and team members .
- AddMemberToMission: Coordinator can add team member to current mission
- createMemberAccount: Coordinator can create a new team member model on database .
- showMap: Coordinator can get all team member locations and show them on real search area map.

- ShowStream: Coordinator can play current video streams on web site
- createDevice: Coordinator can create a new device model on database .
- ListDevices: Coordinator can list all devices to use them in the mission
- listPeople: Coordinator can list all persons to select mission members
- listMissions: Coordinator can list all missions and mission details for current mission
- Logout: Coordinator can logout

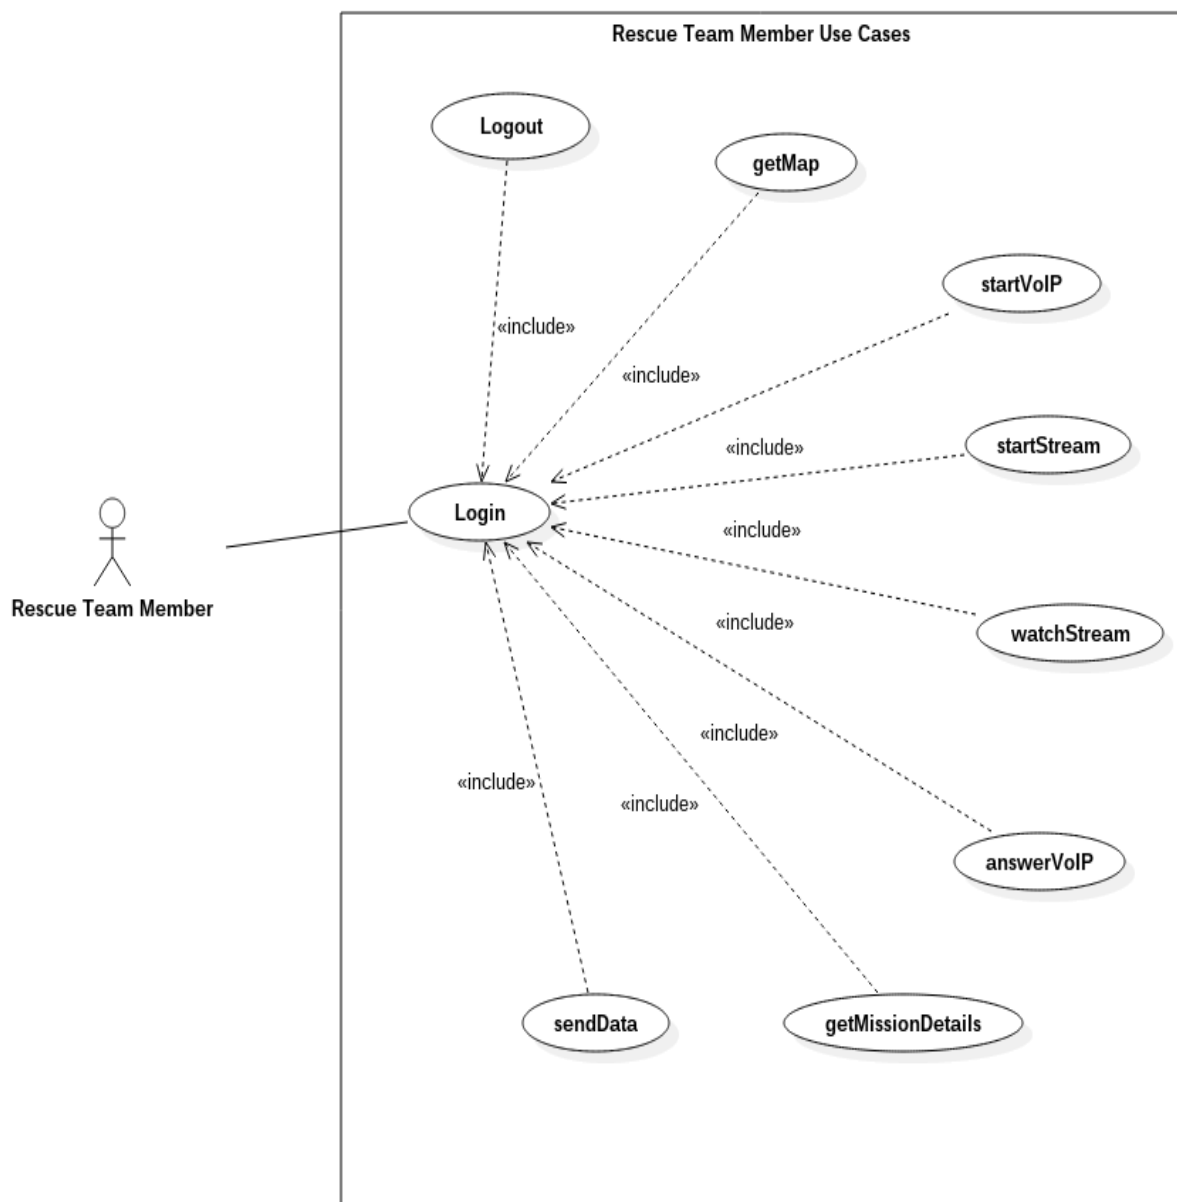

Figure 2 : Android Use Case Diagram

When actor is Team Member:

- Login: Team members will be logged in the system by using their android devices
- Logout: Team members can logout
- getMap : Team members can see other team members positions on the map view
- startVoIP: Any team member can start audio conversation
- startStream: Any team member can start live video stream
- watchStream: When someone is streaming any team member can watch this stream
- answerVoIP: When there is a started conversation user can join
- getMissionDetails: Any team member is able to see mission details
- sendData: Team members can send their informations to center

## **2.2. Interfaces**

### **2.2.1. User Interfaces**

Since our project has two main parts the team member application part will be an Android application that will run on smartphones, there will be a graphical user interface. The interaction with the application will be through touch screen. The other part of the project is mission coordination center is web application that will work on computer. There will also be graphical user interface on web browser. User will be interact through web browser.

### **2.2.2. Hardware Interfaces**

We have several type of sensors as hardware interfaces such as pulse sensor , arm band and laser range finder. We also have Multicopter as a hardware.

### **2.2.3. Software Interfaces**

Software used in this project include Jersey Grizzly Rest Server, Hibernate, DBMS , IntelliJ , Maven , OpenLayer, Android Studio, Android operating system and an augmented reality library.

MySQL is used in the server as DBMS, Communication between database and rest server is operated by hibernate.

The communication with the operating system is done through standard Android API.

#### 2.2.4. Communications Interfaces

The application will communicate with the server via HTTP protocol over internet.

### 2.3. Constraints

- Email address should be valid.
- User Name should be an email address.
- Android version must be at least 5.0.

## 3. Specific Requirements

### 3.1. Functional Requirements

#### 3.1.1. Web Application Functional Requirements

Functional requirements are listed below with use case scenarios for Web Application.

<b>Use Case Scenario</b>	Login
<b>Use Case ID</b>	UC1
<b>Included Use Cases</b>	-
<b>Primary Actor(s)</b>	Coordinator
<b>Description</b>	Coordinator has to login to use web application.
<b>Precondition</b>	Coordinator should have valid account on the system.
<b>Trigger</b>	Coordinator clicks the “Login” button.
<b>Main Success Scenario</b>	Step 1: Coordinator opens the login page. Step 2: Coordinator enters the required information. Step 3: System checks authorizations Step 4: If coordinator is authorized system directs to home page

<b>Alternative Scenario</b>	In Step 4, if information is invalid, system warns the user about information.
<b>Post Condition</b>	None

Table 2 : Login Use Case Scenario

<b>Use Case Scenario</b>	createMission
<b>Use Case ID</b>	UC2
<b>Included Use Cases</b>	UC1
<b>Primary Actor(s)</b>	Coordinator
<b>Description</b>	Coordinator can create a mission.
<b>Precondition</b>	Coordinator should be Login.
<b>Trigger</b>	Coordinator touches the “Create Mission” button.
<b>Main Success Scenario</b>	<p>Step 1: Coordinator opens the home page.</p> <p>Step 2: Coordinator clicks the createMission button.</p> <p>Step 3: Coordinator should give required inputs to create mission.</p> <p>Step 4: Coordinator should click createMission button again to save data.</p> <p>Step 5: System directs to home page.</p>
<b>Alternative Scenario</b>	In Step 3, if informations are missing , system warns the coordinator and doesn create missions
<b>Post Condition</b>	None

Table 3 : createMission Use Case Scenario

<b>Use Case Scenario</b>	coordinateMission
<b>Use Case ID</b>	UC3

<b>Included Use Cases</b>	UC1
<b>Primary Actor(s)</b>	Coordinator
<b>Description</b>	Coordinator can edit mission and finish it.
<b>Precondition</b>	Coordinator should have logged in to the Coordinator.
<b>Trigger</b>	Coordinator touches the “Edit Mission” button.
<b>Main Success Scenario</b>	Step 1: Coordinator selects a Mission that will be edited. Step 2: Coordinator edited required fields. Step 3: Coordinator click save button Step 4: If there is no invalid fields system updates mission
<b>Alternative Scenario</b>	If Step 4 fails, the system give error and does not update database
<b>Post Condition</b>	None

Table 4 : coordinateMission Use Case Scenario

<b>Use Case Scenario</b>	addMemberToMission
<b>Use Case ID</b>	UC4
<b>Included Use Cases</b>	UC1
<b>Primary Actor(s)</b>	Coordinator
<b>Description</b>	Coordinator can add a member to rescue team of a mission.
<b>Precondition</b>	Coordinator should have to login and should have been clicked createMission.
<b>Trigger</b>	Coordinator touches the “Add Person To Mission” button.
<b>Main Success</b>	Step 1: Coordinator selects a person that will be added to mission.

<b>Scenario</b>	Step 2: Coordinator clicks the addPersonToMission .  Step3: Database will be updated accordingly.
<b>Alternative Scenario</b>	
<b>Post Condition</b>	None

Table 5 : addMemberToMission Use Case Scenario

<b>Use Case Scenario</b>	createMemberAccount
<b>Use Case ID</b>	UC5
<b>Included Use Cases</b>	UC1
<b>Primary Actor(s)</b>	Coordinator
<b>Description</b>	Coordinator can create a database record for new team member
<b>Precondition</b>	Coordinator must login to the system
<b>Trigger</b>	Coordinator clicks the “createPerson” button.
<b>Main Success Scenario</b>	Step 1: Coordinator clicks the “createPerson” button.  Step 2: Coordinator enters the required information  Step 3: Coordinator clicks “create” button to save the record on database
<b>Alternative Scenario</b>	If any information is missing or invalid it gives an error
<b>Post Condition</b>	None

Table 6 : createMemberAccount Use Case Scenario

<b>Use Case Scenario</b>	ShowMap
<b>Use Case ID</b>	UC6
<b>Included Use Cases</b>	UC1
<b>Primary Actor(s)</b>	Coordinator
<b>Description</b>	Coordinator can see all team members position on the rescue area map
<b>Precondition</b>	User should have logged in to the S&R
<b>Trigger</b>	User clicks the “showMap” button.
<b>Main Success Scenario</b>	Step 1: Coordinator clicks “showMap” button. Step 2: All team members locations shown on the map on screen
<b>Alternative Scenario</b>	
<b>Post Condition</b>	None

Table 7 : showMap Use Case Scenario

<b>Use Case Scenario</b>	ShowStream Settings
<b>Use Case ID</b>	UC7
<b>Included Use Cases</b>	UC1
<b>Primary Actor(s)</b>	Coordinator

<b>Description</b>	Coordinator can watch live stream videos which is streamed by team members .
<b>Precondition</b>	Coordinator should have logged in to the S&R
<b>Trigger</b>	Coordinator clicks the “ShowStream” button.
<b>Main Success Scenario</b>	<p>Step 1: Coordinator clicks the “ShowStream” button.</p> <p>Step 2: Coordinator selects a stream that will be played.</p> <p>Step 3: The stream will be played on the screen</p>
<b>Alternative Scenario</b>	None
<b>Post Condition</b>	None

Table 8 : ShowStream Use Case Scenario

<b>Use Case Scenario</b>	CreateDevice
<b>Use Case ID</b>	UC8
<b>Included Use Cases</b>	UC1
<b>Primary Actor(s)</b>	Coordinator
<b>Description</b>	Coordinator can create a database record for new device
<b>Precondition</b>	Coordinator must login to the system
<b>Trigger</b>	Coordinator should click “CreateDevice” button

<b>Main Success Scenario</b>	Step 1: Coordinator should click “CreateDevice” button Step 2: Coordinator enters the required information Step 3 : Coordinator clicks “Create” button Step 4 : System updates the database as desired
<b>Alternative Scenario</b>	In Step 3, if any information is missing it gives an error
<b>Post Condition</b>	None

Table 9 : CreateDevice Use Case Scenario

<b>Use Case Scenario</b>	List Devices
<b>Use Case ID</b>	UC9
<b>Included Use Cases</b>	UC1
<b>Primary Actor(s)</b>	Coordinator
<b>Description</b>	Coordinator can list and see information about devices
<b>Precondition</b>	Coordinator must login to the S&R system.
<b>Trigger</b>	Coordinator should click “ListDevices” button
<b>Main Success Scenario</b>	Step 1: Coordinator should click “ListDevices” button
<b>Scenario</b>	Step 2: Device list will be shown on the screen
<b>Alternative Scenario</b>	None
<b>Post Condition</b>	None

Table 10 : ListDevices Use Case Scenario

<b>Use Case Scenario</b>	List Missions
<b>Use Case ID</b>	UC10
<b>Included Use Cases</b>	UC1
<b>Primary Actor(s)</b>	Coordinator
<b>Description</b>	Coordinator can list and see information about missions
<b>Precondition</b>	Coordinator must login to the S&R system.
<b>Trigger</b>	Coordinator should click “ListMission” button
<b>Main Success Scenario</b>	Step 1: Coordinator should click “ListMission” button Step 2: Mission list will be shown on the screen
<b>Alternative Scenario</b>	None
<b>Post Condition</b>	None

Table 11 : ListMissions Use Case Scenario

<b>Use Case Scenario</b>	Logout
<b>Use Case ID</b>	UC11
<b>Included Use Cases</b>	UC1
<b>Primary Actor(s)</b>	Coordinator
<b>Description</b>	Coordinator can logout from the S&R system
<b>Precondition</b>	Coordinator must login to the S&R system.
<b>Trigger</b>	Coordinator should click “Logout” button
<b>Main Success Scenario</b>	<p>Step 1: Coordinator should click “Logout” button</p> <p>Step 2: System directs to Login Page</p>
<b>Alternative Scenario</b>	None
<b>Post Condition</b>	None

Table 12 : Logout Use Case Scenario

### 3.1.2. Mobile Application Functional Requirements

Functional requirements are listed below with use case scenarios for Android Application.

<b>Use Case Scenario</b>	Login
<b>Use Case ID</b>	UC1
<b>Included Use Cases</b>	-
<b>Primary Actor(s)</b>	Team Member
<b>Description</b>	Team Member has to login to use android application.
<b>Precondition</b>	Team Member should have valid account on the system.
<b>Trigger</b>	Team Member touches the “Login” button.
<b>Main Success Scenario</b>	Step 1: Team Member opens the login page. Step 2: Team Member enters the required information. Step 3: System checks authorizations Step 4: If Team Member is authorized system directs to home page
<b>Alternative Scenario</b>	In Step 4, if information is invalid, system warns the Team Member about information.
<b>Post Condition</b>	None

Table 13 : Login Use Case Scenario

<b>Use Case Scenario</b>	Logout
--------------------------	--------

<b>Use Case ID</b>	UC2
<b>Included Use Cases</b>	UC1
<b>Primary Actor(s)</b>	Team Member
<b>Description</b>	Team Member can logout from the S&R system
<b>Precondition</b>	Team Member must login to the S&R system.
<b>Trigger</b>	Team Member should touch “Logout” button
<b>Main Success Scenario</b>	Step 1: Team Member should touch “Logout” button Step 2: System directs Login Page
<b>Alternative Scenario</b>	None
<b>Post Condition</b>	None

Table 14 : Logout Use Case Scenario

<b>Use Case Scenario</b>	GetMap
<b>Use Case ID</b>	UC3
<b>Included Use Cases</b>	UC1
<b>Primary Actor(s)</b>	Team Member
<b>Description</b>	Team Member can see all team members position on the rescue area map

<b>Precondition</b>	Team Member should have logged in to the S&R
<b>Trigger</b>	Team Member touches the “getMap” button.
<b>Main Success Scenario</b>	Step 1: Team member touches “getMap” button. Step 2: All team members locations shown on the map on screen
<b>Alternative Scenario</b>	
<b>Post Condition</b>	None

Table 15 : GetMap Use Case Scenario

<b>Use Case Scenario</b>	StartVoIP
<b>Use Case ID</b>	UC4
<b>Included Use Cases</b>	UC1
<b>Primary Actor(s)</b>	Team Member
<b>Description</b>	Team Member can start audio conversation to communicate with other team members
<b>Precondition</b>	Team Member should have logged in to the S&R
<b>Trigger</b>	Team Member touches the “startVoIP” button.

<b>Main Success Scenario</b>	Step 1: Team member touches “startVoIP” button. Step 2: The other members will be informed about conversation
<b>Alternative Scenario</b>	
<b>Post Condition</b>	None

Table 16 : StartVoIP Use Case Scenario

<b>Use Case Scenario</b>	StartStream
<b>Use Case ID</b>	UC5
<b>Included Use Cases</b>	UC1
<b>Primary Actor(s)</b>	Team Member
<b>Description</b>	Team Member can start video stream to share its vision to other team members
<b>Precondition</b>	Team Member should have logged in to the S&R
<b>Trigger</b>	Team Member touches the “startStream” button.
<b>Main Success Scenario</b>	Step 1: Team member touches “startStream” button. Step 2: The other members will be informed about streaming
<b>Alternative Scenario</b>	

<b>Post Condition</b>	None
-----------------------	------

Table 17 : StartStream Use Case Scenario

<b>Use Case Scenario</b>	WatchStream
<b>Use Case ID</b>	UC6
<b>Included Use Cases</b>	UC1
<b>Primary Actor(s)</b>	Team Member
<b>Description</b>	Team Member can watch video stream that is streamed by other team members.
<b>Precondition</b>	Team Member should have logged in to the S&R
<b>Trigger</b>	Team Member touches the “watchStream” button.
<b>Main Success Scenario</b>	<p>Step 1: Team member selects stream to watch</p> <p>Step 2: TeamMember touches “watchStream” button.</p> <p>Step 3: Stream opens on device screen</p>
<b>Alternative Scenario</b>	If any stream is not selected on step1 it gives an warning
<b>Post Condition</b>	None

Table 18 : WatchStream Use Case Scenario

<b>Use Case Scenario</b>	AnswerVoIP
<b>Use Case ID</b>	UC7
<b>Included Use Cases</b>	UC1
<b>Primary Actor(s)</b>	Team Member
<b>Description</b>	Team Member can answer VoIP call and join audio conversation
<b>Precondition</b>	Team Member should have logged in to the S&R
<b>Trigger</b>	Team Member touches the “answerVoIP” button.
<b>Main Success Scenario</b>	<p>Step 1: TeamMember touches “answerVoIP” button.</p> <p>Step 2: Audio conversation opens on device</p>
<b>Alternative Scenario</b>	None
<b>Post Condition</b>	None

Table 19 : AnswerVoIP Use Case Scenario

<b>Use Case Scenario</b>	Get Mission Details
<b>Use Case ID</b>	UC8
<b>Included Use Cases</b>	UC1
<b>Primary Actor(s)</b>	Team Member
<b>Description</b>	Any Team Member can get all information about mission and other team members information
<b>Precondition</b>	Team Member should have logged in to the S&R
<b>Trigger</b>	Team Member touches the “getMissionDetails” button.
<b>Main Success Scenario</b>	<p>Step 1: TeamMember touches “getMissionDetails” button.</p> <p>Step 2: All Mission information are shown on the device screen</p>
<b>Alternative Scenario</b>	None
<b>Post Condition</b>	None

Table 20 : GetMissionDetails Use Case Scenario

<b>Use Case Scenario</b>	Send Data
<b>Use Case ID</b>	UC9
<b>Included Use Cases</b>	UC1
<b>Primary Actor(s)</b>	Team Member
<b>Description</b>	Any Team Member can send their information to control center
<b>Precondition</b>	Team Member should have logged in to the S&R
<b>Trigger</b>	Every 10 seconds device automatically sends their location and current informations
<b>Main Success Scenario</b>	Step 1: If GPS is active on the device data will be automatically send
<b>Alternative Scenario</b>	If GPS is inactive it gives a warning
<b>Post Condition</b>	None

Table 21 : SendData Use Case Scenario

## **3.2. NonFunctional Requirements**

### **3.2.1. Usability**

- Team Members and coordinators will be trained before using this project so users can easily adapt on this project.
- Database hold past missions and records therefore which device or person problematic can easily be identified and replaced

### **3.2.2. Reliability**

- System should be up for 99% of the time excluding scheduled system maintenance.
- In case of a system crash, system can be brought up within four hours.

### **3.2.3. Performance**

- The server should capable of 100 mission at same time.
- The server should respond in 0.2 seconds at maximum.

### **3.2.4. Supportability**

- The application will run on any mobile device that has Android version 5.0 and later versions.
- The web application will run on any web browser

### **3.2.5. Security**

- The access permissions for system data can only be changed by the system's administrator.
- The communication between the system's data server and clients will be encrypted.

## 4. Data Model and Description

### 4.1. Data Objects

Class diagram of system can be shown at below.

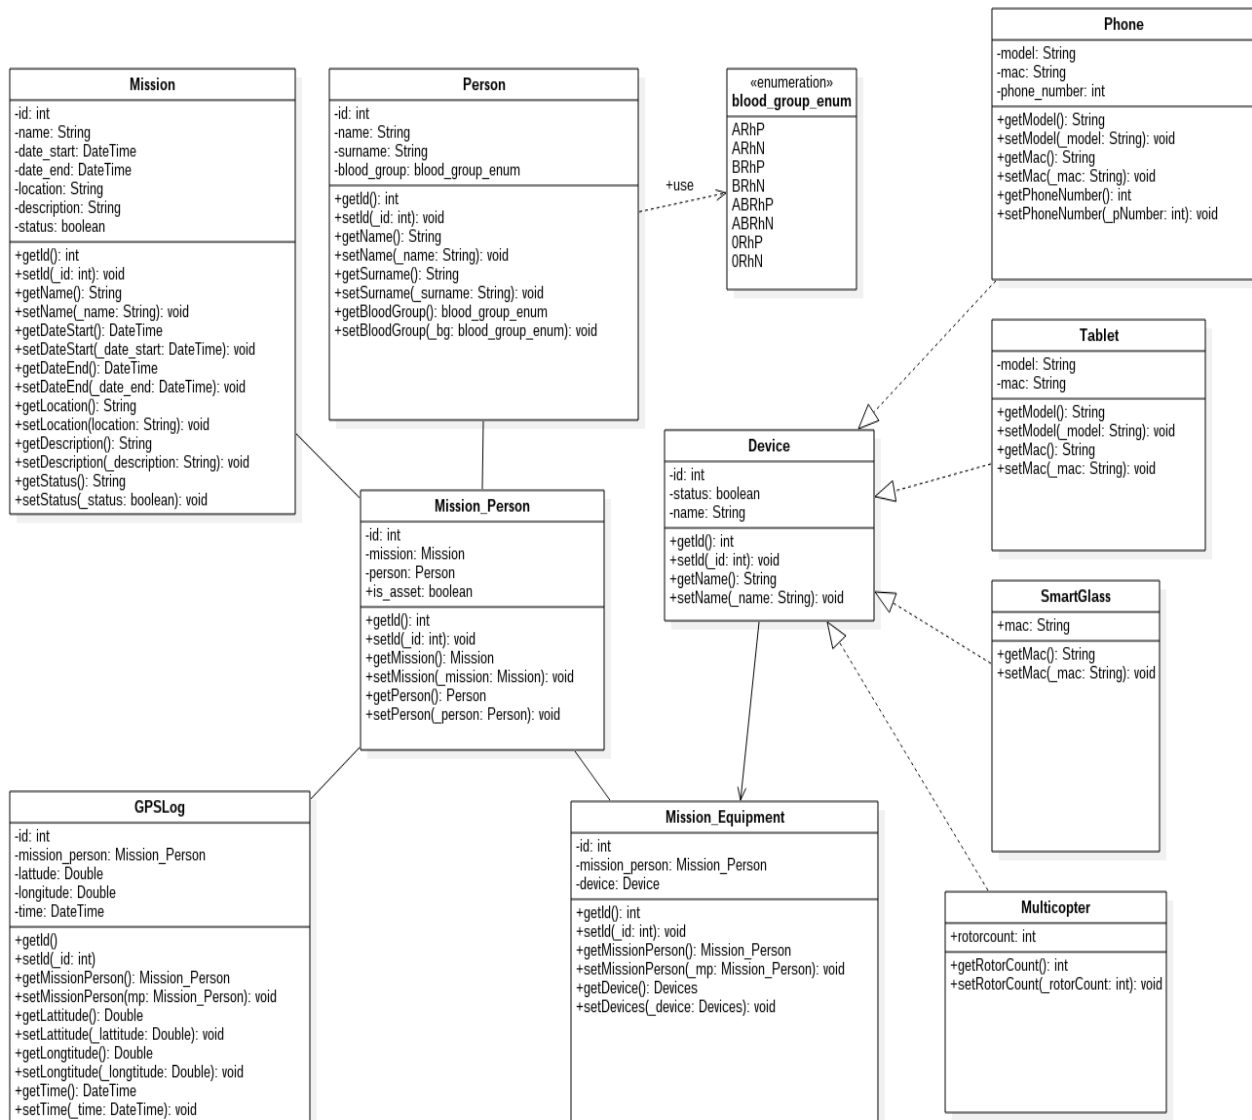

Figure 3 : Class Diagram

## 4.2. Logical Database

In this section, logical view of database and ER diagram can be shown.

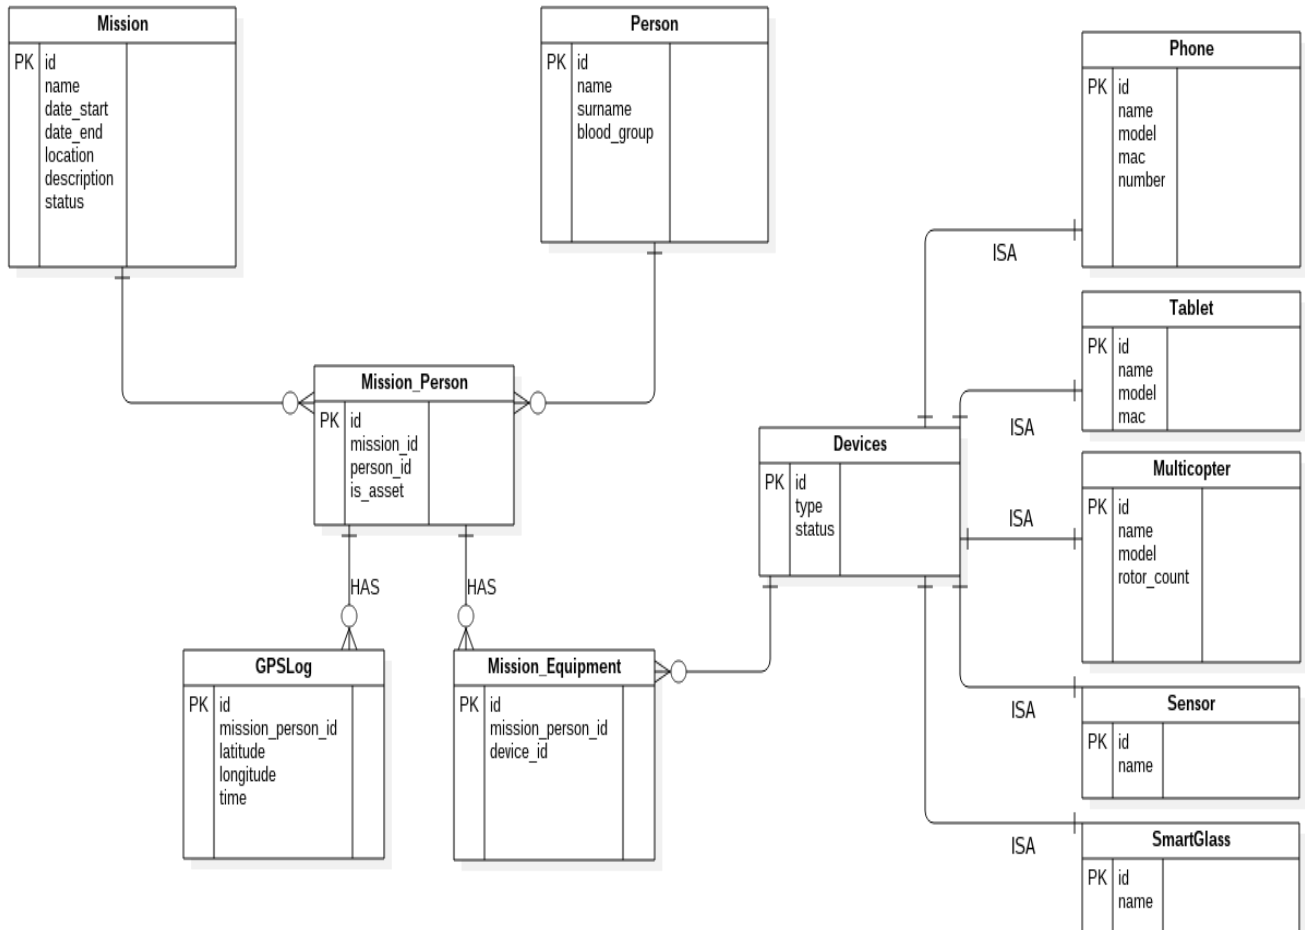

Figure 4 : ER Diagram
