WHAT IS THE PROBLEM ?

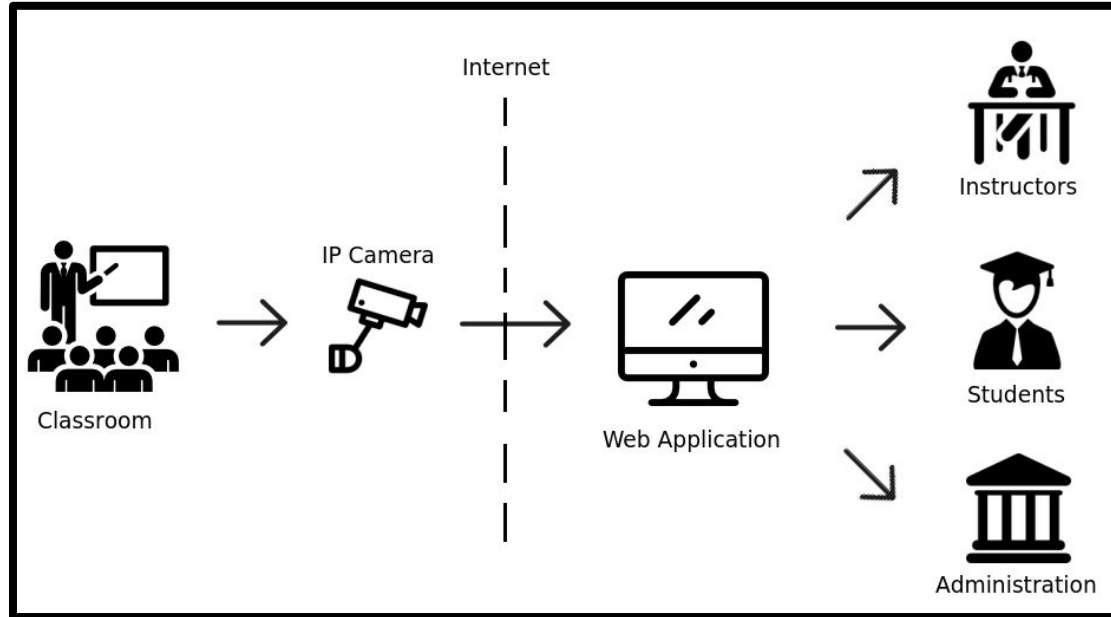

- Absence of an automated attendance system
- Students' interests to courses are not measured properly
- It is nearly impossible for students to track their attendance rates
- End of the year instructor evaluations do not reflect the truth

WHAT ARE THE CURRENT SOLUTIONS ?

- Similar products;
 - only offer face recognition.
 - are embedded systems that you need to recognise yourself when entering the class.
 - are not widely used.

WHAT DO WE OFFER ?

EduSys

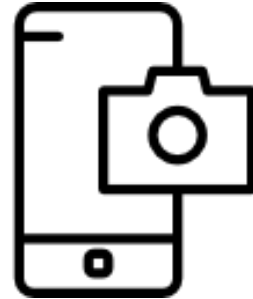

HOW DO WE DIFFER ?

Attendance is now automated, in class and fast. 

- Attendance is just one click away.
 - Online attendance

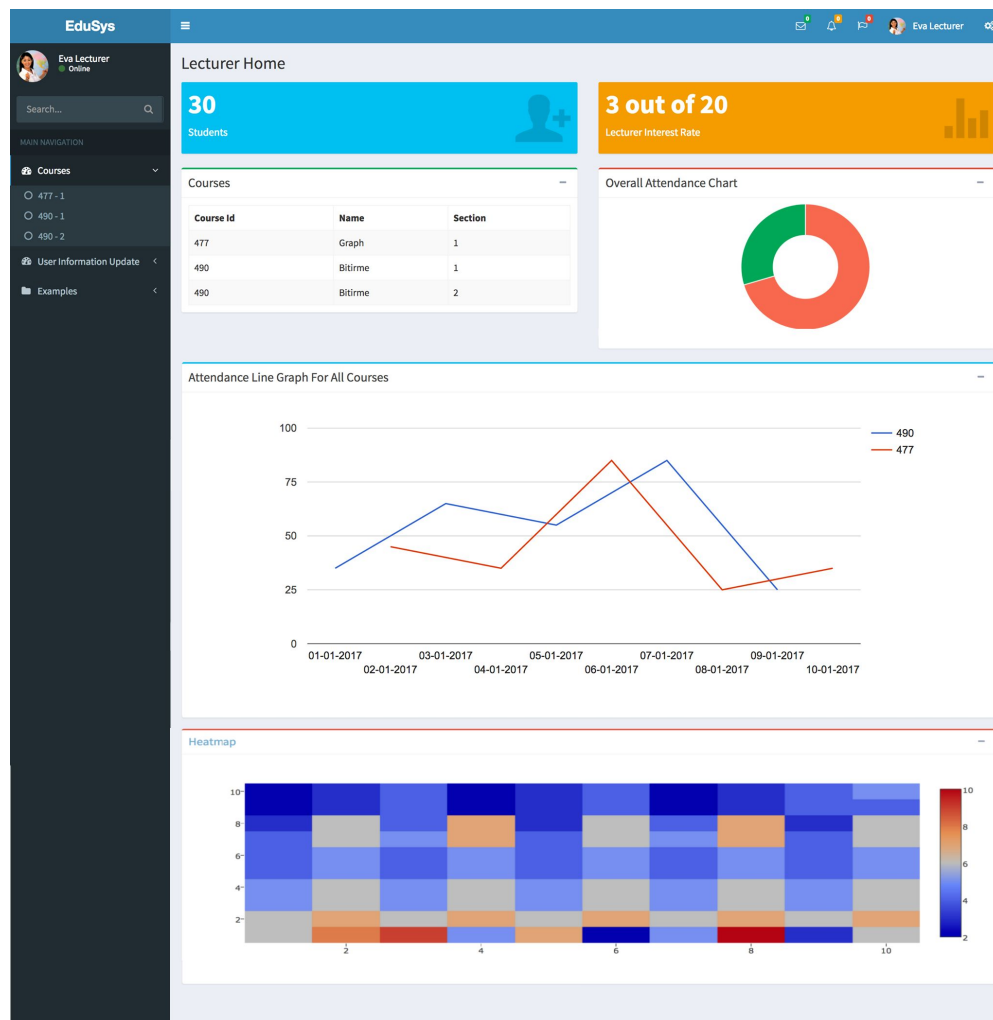

- Offline attendance

HOW DO WE DIFFER ?

We turn data chunks into meaningful statistics. 

- We gather statistics
 - Attendance rate
 - Seating place
 - Exam grades
- We combine them and generate interest percentage for students
- We present them with advanced graphics in user friendly dashboards

HOW DO WE DIFFER ?

We notify users. 

- Are you failing this class?
 - Students and Instructors are notified in case of a possible failure due to attendance rate.

HOW DO WE DIFFER ?

We generate future career interest paths.

- Can't you decide which elective course to take? Or which research area to follow?
 - **EduSys** generates future career paths according to interest, attendance and grades of students to certain course combinations.

HOW DO WE DIFFER ?

Instruction evaluation is now an honest feedback.

- Attendance and interest informations for all courses and instructors are provided to university administration.

Now let's see what we accomplished so far...

Thank you...
