

Historia

Interactive Cultural Heritage Tour Guide

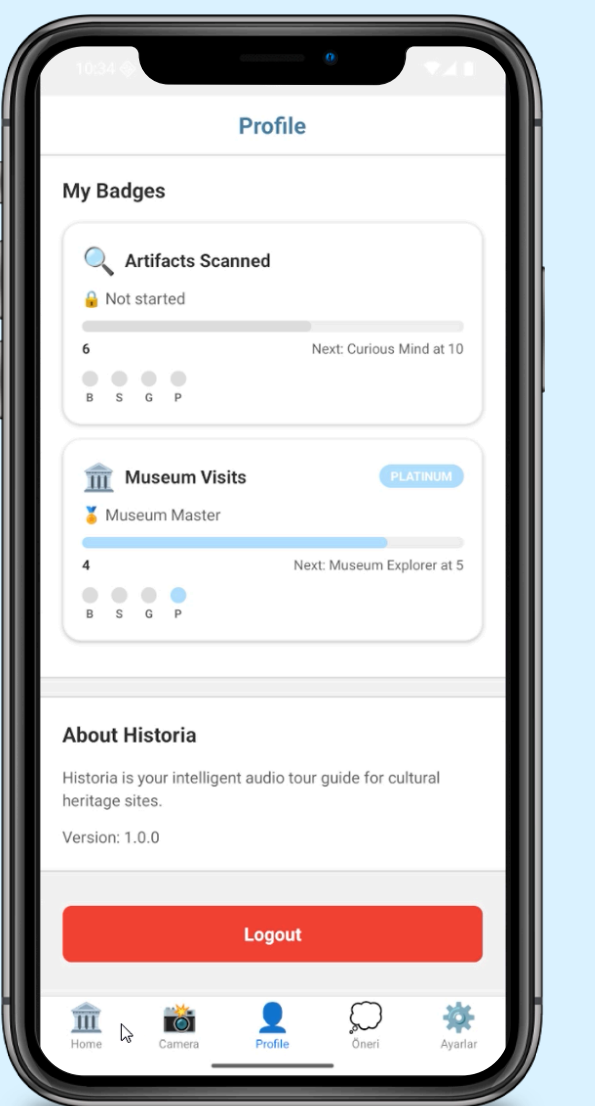

Historia transforms passive museum visits into interactive, gamified adventures, replacing static plaques with dynamic, digital discovery.

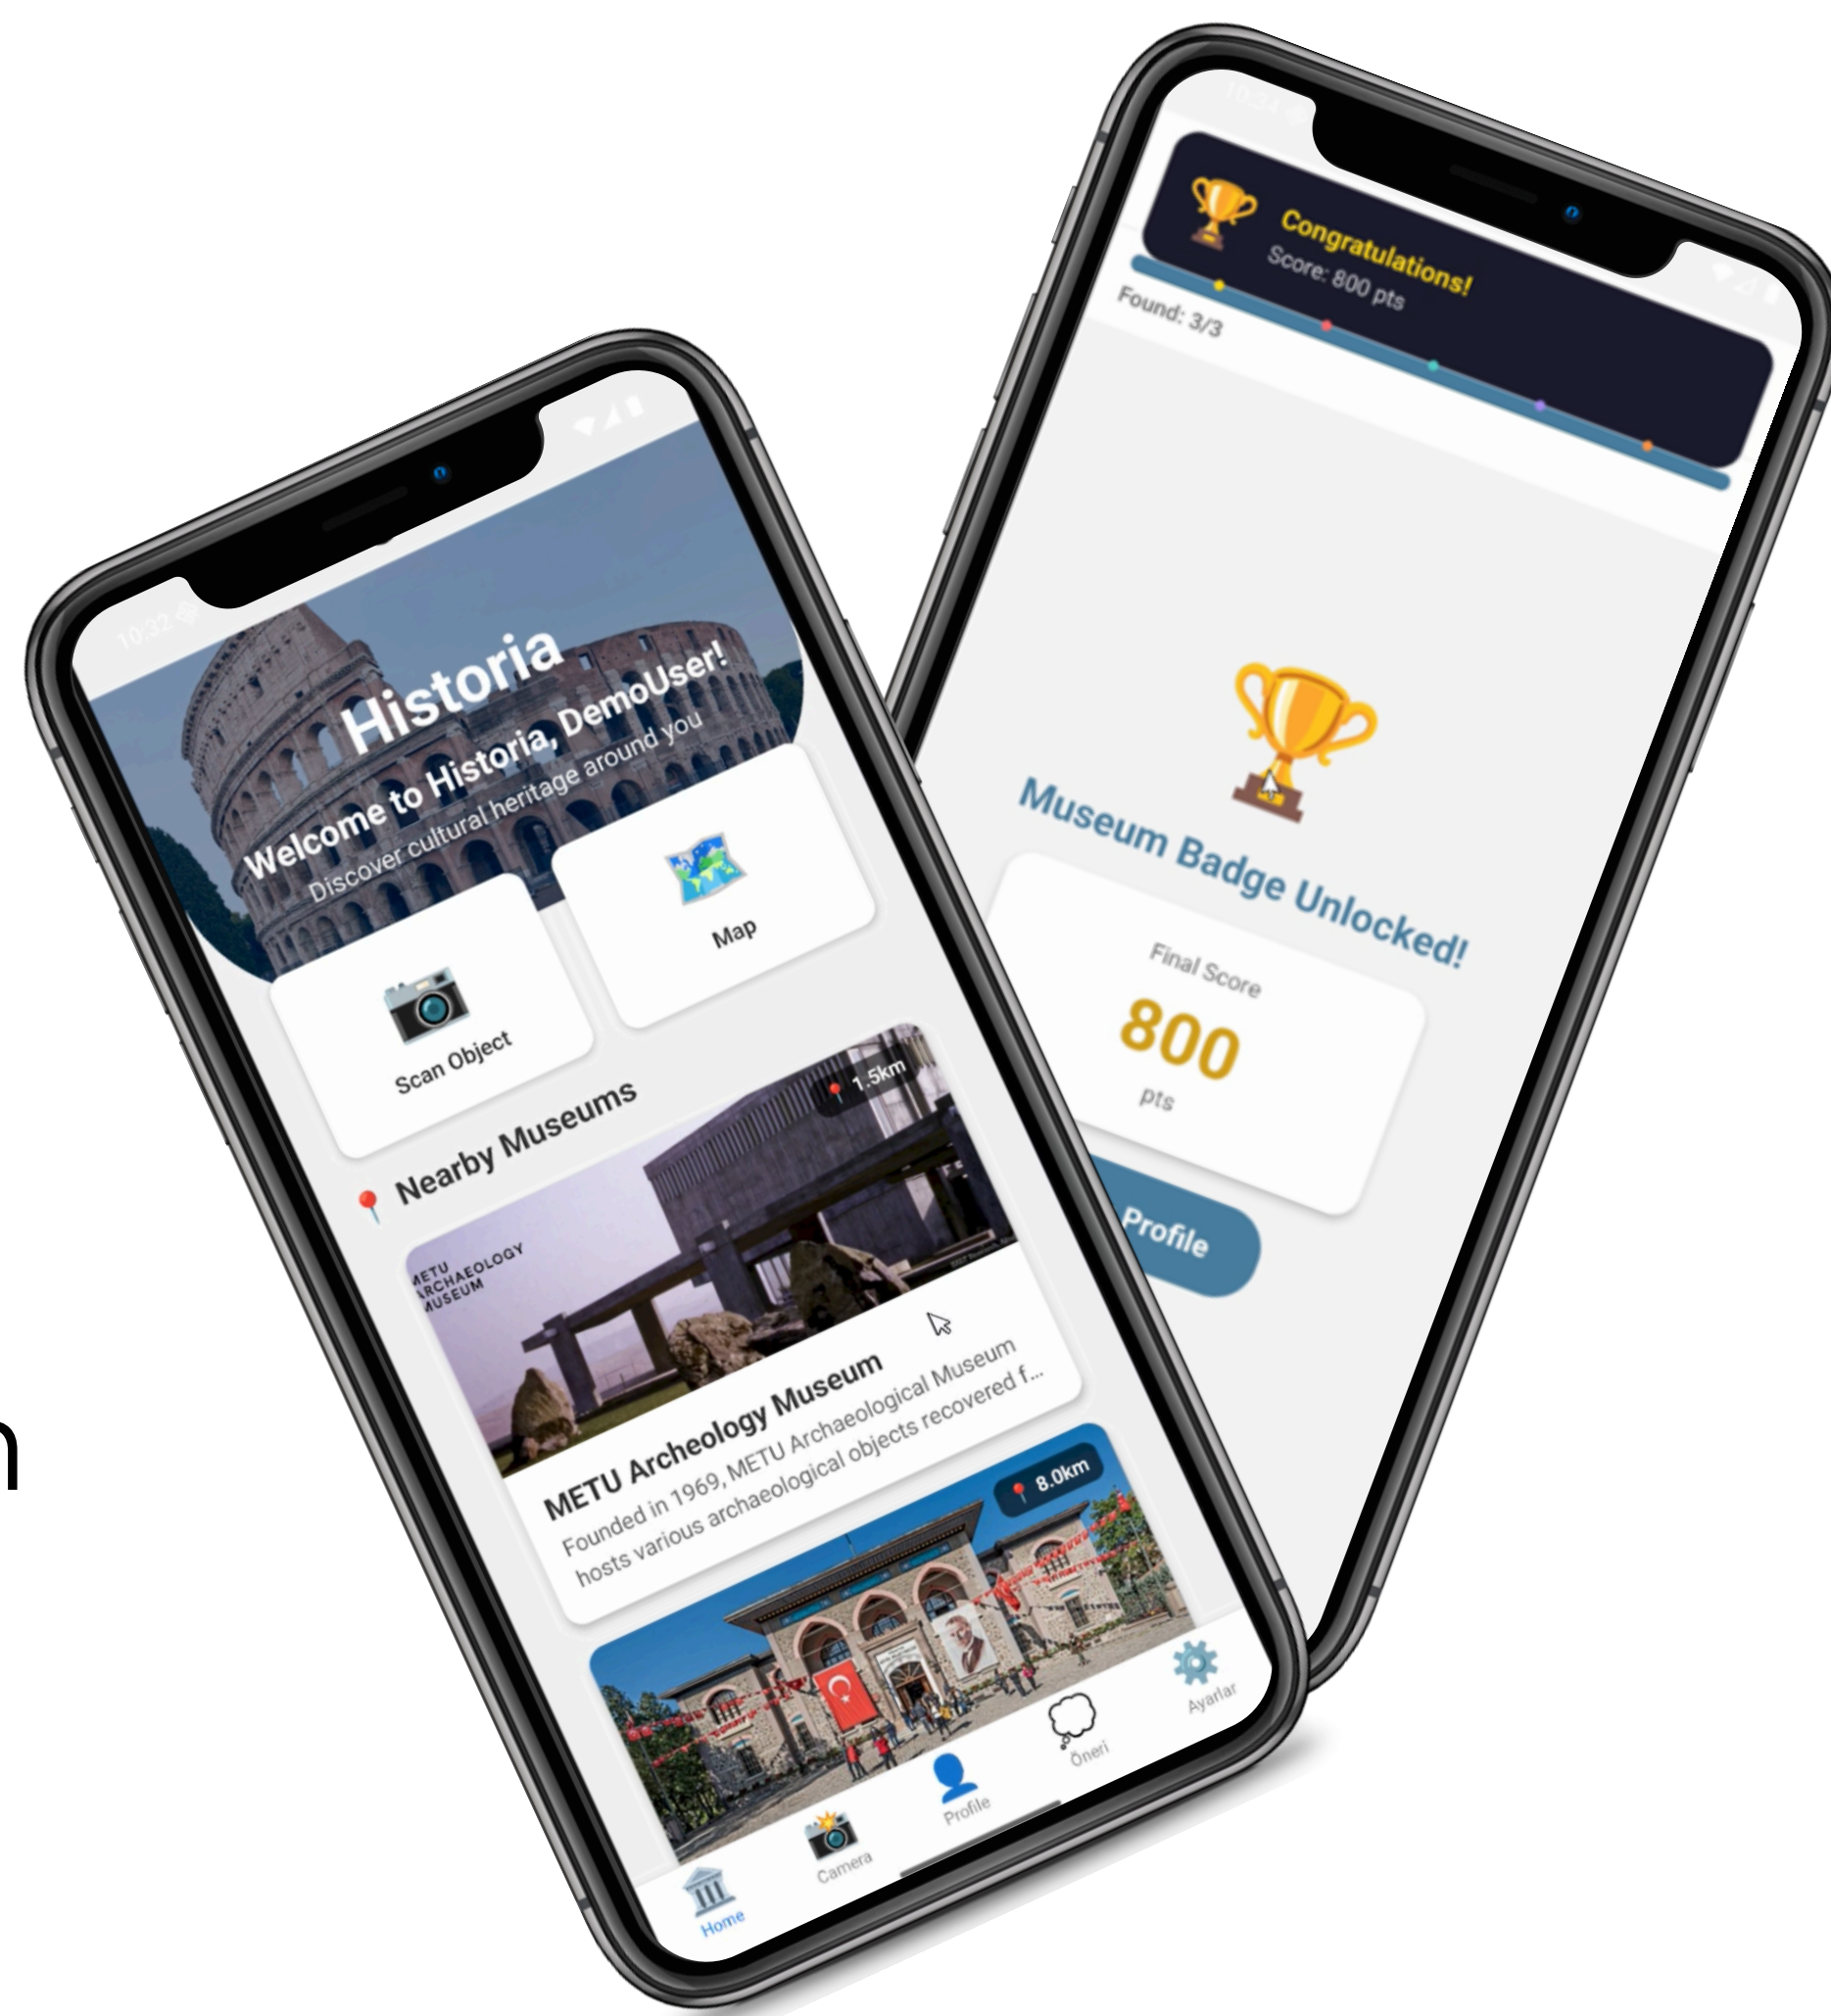

Locate museums via GPS and instantly identify artifacts using our dual-pipeline AI—TFLite for precision and Gemini for context.

Turn learning into play with custom scavenger hunts, knowledge-check quizzes, and tiered achievement badges that reward exploration.

Built on a scalable microservices stack featuring a React Native app, Rust (Axum) backend, and Python-based vision service.
